Not ready to shine yet

- Maintain cautious view as demand recovery expected to remain soft
- Marketing sales expected to grow just from price, not volume
- Sector has underperformed and thus its valuation is undemanding, but it lacks near-term catalysts
- Prefer defensive stocks like BSDE

Maintain cautious view on property sector. Although we believe the phase of negative marketing sales growth is over (having bottomed in 2016), marketing sales will grow at a slow pace in 2018 as demand recovery remains muted. In addition, political risks could dampen the sentiment ahead of the 2019 election. Aside from valuation and underperformance issues, the sector still lacks near-term catalysts.

Demand recovery will move at a slow pace. As

affordability has only started to recover in 2016, we believe it would still need some time for real demand to catch up. We expect real demand to take around three years to catch up with elevated levels of property prices. Investors, on the other hand, will not find property as an attractive investment instrument in the near future. We believe that property price appreciation over the last three years has trailed the expectations of investors who also need to contend with liquidity risks associated with property investments.

Mainly driven by price rather than volume. We expect marketing sales to grow by just 5% in 2018, driven by price increase rather than volume pick-up. Although aggregate marketing sales have shown a huge improvement over 2016, but the growth was driven by bulk land plot sales and Lippo Karawaci's (LPKR) Meikarta project. Excluding those, we believe demand remains sluggish and expect FY17F marketing sales to be flat y-o-y.

We prefer defensive stocks. Bumi Serpong Damai (BSDE) remains our top pick, as it appears to enjoy competitive advantages arising from its strong balance sheet and profit margins. Coupled with its huge land bank, we believe BSDE could still do well in a weak demand environment.

Downside risks for 2017 marketing sales

We expect some developers to miss marketing sales target

Even though some developers have revised down their FY17 target, we expect marketing sales achievement to still miss their target this year. The downside risks to our view include more land plot sales and the strong performance of the Meikarta project that has contributed significantly to LPKR's marketing sales achievement.

9M17 marketing sales achievement vs FY17 target

Source: Company, DBSVI *Total marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON,

^Total marketing sales of APLN, ASKI, BSDE, CTKA, LPKK, PWON, SMRA

Most developers have lagged behind in their marketing sale

Most developers have lagged behind in their marketing sales achievement in 9M17. BSDE and Ciputra Development (CTRA) are among the high achievers with 66% and 65% of their full-year targets being met respectively in 9M17. BSDE's marketing sales have been supported by its land plot sales. Excluding its land plot sales, 9M17 marketing sales met only 31% of its FY17 target. CTRA's marketing sales have been supported by its North West Hill cluster launch in Surabaya area, which raked in Rp1.1tr.

LPKR's modest achievement of 54% is mainly attributed to its Meikarta project that was launched in 2Q17. The project contributed 95% of its 9M17 marketing sales achievement. At 57% of its FY17 target, Summarecon Agung's (SMRA) achievement is akin to LPKR's. But SMRA has revised down its marketing sales to Rp3.5tr from Rp4.5tr previously. Alam Sutera Realty (ASRI) posted the lowest achievement at 25% due to its high marketing sales target of Rp5tr while its marketing sales achievement was flat on a y-o-y basis.

In the first nine months, only Agung Podomoro Land (APLN) and Pakuwon Jati (PWON) were on track to meet their

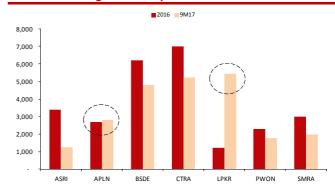

marketing sales target. APLN's 9M17 marketing sales met 80% of its FY17 target. The bulk of its marketing sales came from its land plot sales to China Fortune Land Development (CFLD) in 1Q17. PWON, after missing its 2016 marketing sales target, has lowered its target this year to Rp2.5tr (+10% from 2016's achievement). Its 9M17 marketing sales have met 71% of its FY17 target.

Slow coming off the bottom

Although we believe the phase of negative marketing sales growth is over (having bottomed in 2016), marketing sales will grow at a slow pace going forward, in our view. This has led us to maintain our cautious view on the sector despite the underperformance of the sector vs the JCI in 2017.

The marketing sales of developers in our coverage have improved, with the 9M17 number coming in at Rp23.3tr or just 10% below FY16's Rp25.7tr. The bulk of sales came from LPKR that recorded a spike in its marketing sales arising from its new grand project in the Cikarang area, Meikarta. APLN also posted a huge improvement in its 9M17 marketing sales achievement that already exceeded its FY16 figure. However, this mostly came from its industrial land plot sales in Karawang to CFLD that amounted to Rp1.4tr. The transaction made up half of its 9M17 marketing sales of Rp2.8tr.

9M17 marketing sales compared to FY16

Source: Company, DBSVI

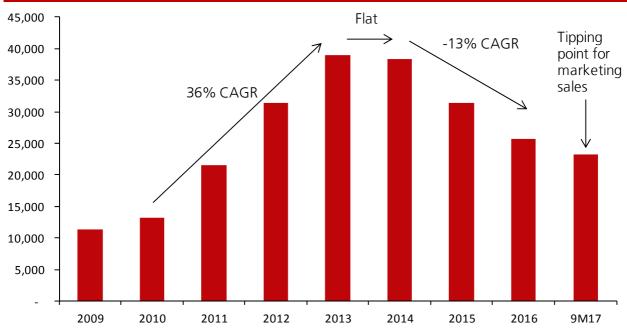

Marketing sales posted negative growth over the past few years

Property developers booked a stellar marketing sales CAGR of 36% from 2010-2013. But this has slowed down since then and property developers have had a hard time in growing their

marketing sales further. Despite the optimism on the property sector, marketing sales have deteriorated from the peak in 2013 with negative 13% CAGR over 2014-2016.

Marketing sales of property developers* (Rp bn)

*Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

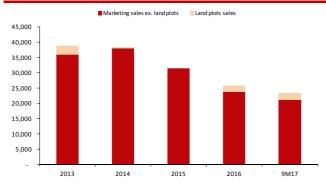

Marketing sales helped by land plot sales

More land plots sales to be recorded

The marketing sales achieved in FY16 and 9M17 have been helped by bulk sales from land plots. Land plots sales for developers in our coverage stood at Rp2tr in FY16 and increased by 10% to Rp2.2tr in 9M17. With some of the companies in our coverage expecting to rake in additional Rp2tr land plot sales in total, the land plot sales figure could double from last year's if they materialise.

Marketing sales of property developers

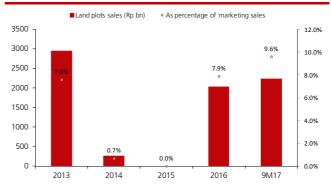

Source: Company, DBSVI

*Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

Relative to total marketing sales, land plot sales contribution in 9M17 reach a new level of 9.6% compared to 7.9% last year and 7.6% in 2013. Despite being higher in terms of value, the proportion of land plot sales to total marketing sales in 2013 was lower due to the fact that marketing sales peaked in 2013.

Land plots sales and their percentage to total marketing sales

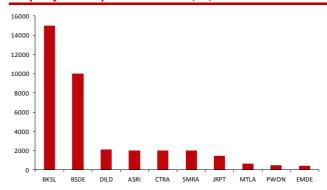

Source: Company, DBSVI

*Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

The trend will continue. We expect property developers to continue to record land plot bulk sales in view of the weak demand environment to boost their marketing sales and improve their balance sheet. Property developers with huge and valuable land bank will benefit from this trend, in our view.

Property developers' land bank (ha)

Marketing sales outlook

Developers will ramp up marketing sales in 4Q17

Despite lagging behind in 9M17 marketing sales achievement, some developers are ready to ramp up their marketing sales. ASRI is looking for a spectacular jump in its marketing sales achievement in 4Q17 from its second land plot sale to CFLD and the bulk sale of its office tower in Jakarta, The Tower. Around Rp1tr and Rp2tr marketing sales are expected for the land plot sale and office building sale respectively.

After booking Rp840bn from its JV land plot sale to Mitsubishi, BSDE is looking for another land plot sale with a value of Rp1tr. Combined with its marketing scheme, Price Lock, BSDE could achieve its marketing sales target. In the first month of its 3-month Price Lock promotion, BSDE has raked in Rp700bn marketing sales. If the land plot sale materialises, it will need to book Rp700bn marketing sales in the last two months of 2017, which we think is achievable.

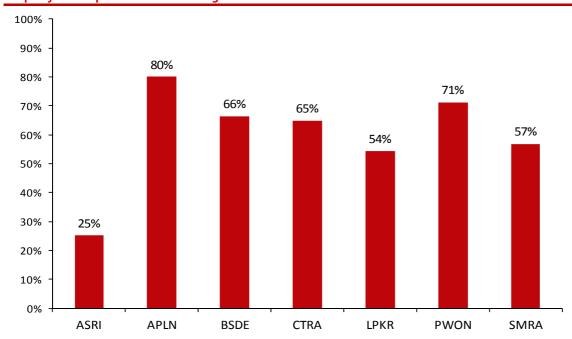

CTRA's marketing sales in 4Q17 will depend on its new launches in Jakarta and Batam. The company expects to book Rp300bn from its high-rise development in Nagoya Hill,

Batam, and Rp400bn from its Newton 2 apartment in Ciputra World 2 extension, Jakarta. CTRA's marketing sales will also be helped by its decision to sell service apartments in its Ciputra World 2 project for Rp675bn to Ascott Ltd.

LPKR's marketing sales this year will still depend on its mega project, Meikarta. Located in Cikarang with a development plan of 500ha, the project has gained huge attention due to its extensive marketing efforts. Since its launch in 2Q17, the project has contributed c.Rp2tr marketing sales each guarter.

SMRA has lagged behind its peers due to the weaker-than-expected marketing sales for its new development area in Bekasi, Bandung, and Karawang. The Serpong area remains the main contributor for SMRA, which is on track to meet its full-year target given that its 9M17 marketing sales met 73% of its FY17 target. Its newly project launch in Serpong, Symphonia, has gained traction with marketing sales of at least c.Rp700bn expected to be booked in 4Q17. Thus, thanks to the Serpong project, SMRA should exceed its marketing sales target this year.

^{*}Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

Marketing sales will grow by 5% in 2018, driven by price

We expect marketing sales to grow by 5% in 2018. But this growth will be driven by price increase rather than volume pick-up. In addition to our thesis of weak demand, we also take into consideration political issues to arrive at our assumption of weak volume growth.

FY17F supported by Meikarta and bulk land plot sales

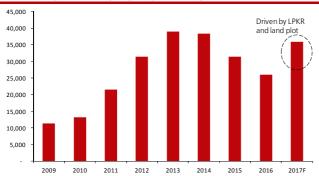

Aggregate marketing sales are expected to jump by 38% y-o-y to Rp35.9tr in FY17F. The main drivers include:

- 1. LPKR's Meikarta project
- 2. Bulk land plot sales by APLN, ASRI, and BSDE

LPKR has recently launched its new grand project in Cikarang, Meikarta. The project has brought LPKR's marketing sales to Rp5.4tr in 9M17, more than three-fold its low-base FY16 marketing sales. Its 9M marketing sales even hit a record high in 2016 to the tune of Rp5.2tr.

Land plot sales are expected to double y-o-y to Rp4.2tr in FY17F from Rp2.0tr in FY16. As of end-Sep 2017, Rp2.2tr land plot sales have been booked in FY17. ASRI and BSDE expect Rp2tr worth of bulk land plot sales to be booked in 4Q17.

Marketing sales of property developers

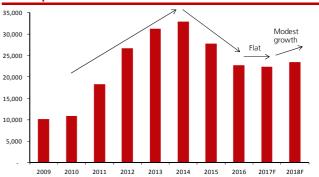

Source: Company, DBSVI

*Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

Although aggregate marketing sales have a shown huge improvement over 2016, the growth was driven by bulk land plot sales and LPKR's Meikarta project. Excluding those, we expect FY17F marketing sales to be flat on a y-o-y basis. Going forward, we believe volume growth will remain soft in view of the weak demand environment and highly volatile political sentiment.

It should take around three years for affordability to catch up

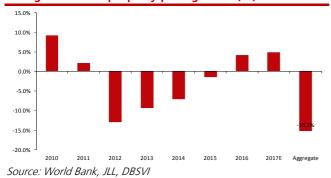

It takes time for real demand to catch up

Affordability has only started to recover in 2016. Therefore, we believe it would still need some time for real demand to catch up. We expect real demand to take around three years time to catch up with elevated levels of property prices. Our analysis uses aggregate GDP per capita growth over property price in Greater Jakarta area and 2017F GDP growth over property price appreciation forecast going forward. Our economist expects 2017 GDP to grow at 5.1% and inflation to come in at 3.9%. We expect property price to grow at 3%, representing a slight increase vs 2.2% in 2016.

Property price growth vs GDP growth (%)

GDP growth over property price growth (%)

Property price appreciation had outran purchasing power

During the property boom period in 2011-2013, property prices had increased dramatically (i.e. land price in Serpong area rose at a CAGR of 40%) due to high demand from investors. Then, most people could not care less about prices as they believed prices will only go up. During those times, the purchasing power of property buyers had declined due to the fact that the pace of property price appreciation had

outran the growth in income levels.

A year after the slowdown in Indonesia's property market, the property price appreciation rate had decelerated significantly to around the same level as GDP per capita growth. In 2015, market optimism on the property market had, once again, caused property price appreciation to trounce purchasing power growth. Optimism turned out to be just optimism after all. The price uptrend was fuelled by just expectations and not real demand.

After optimism about the property market started to diminish, property price appreciation decelerated again in 2016, even to the point of trailing the GDP per capita growth for that year. We see this as the turnaround point, after which the affordability of property in Indonesia should increase. Real demand appears to be still trying to catch up with bubbly property prices over the past five years.

Potential fuel for demand acceleration

Although the affordability of property is still on the path of recovery, the potential for a faster demand pick-up is possible. The factors that can stimulate demand are low mortgage rates, easier payment terms from property developers, and favourable government regulation. However, due to the prevailing macroeconomic conditions, we do not expect mortgage rates to go significantly lower than current levels.

Easier payment terms from property developers are still a possibility, as long as they have the balance sheet to do so. However, some developers might find it hard due to their gearing limitation, as they have been offering longer terms of payment since the onset of the property market slowdown.

Regulation could boost demand significantly. However, we do not think the current loan-to-value (LTV) ratio can be relaxed further as we think it is currently at a healthy level. Policies that promote foreign property ownership could help boost demand. But given the current state of the property market in Indonesia, we do not think that foreigners will find foreign property ownership attractive.

Investors are steadily leaving the bandwagon

Property investment has no appeal

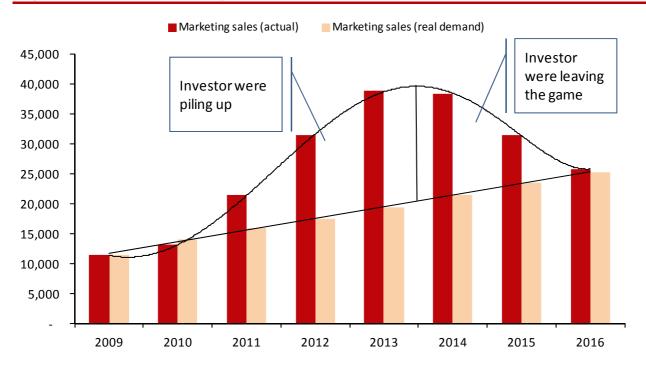

We believe the property boom experienced over 2011-2013 was the result of many investors seeking out investment opportunities and/or speculators making a quick return on their investment. We noticed that unhealthy demand arose at that time, with some people buying several properties at once (usually high-rise units due to their cheaper price) only to sell them only after a few months if not weeks.

Following the episode of weak economic growth in late 2013, we believe that property investors were leaving the game as they started to feel that it was getting harder to sell their investment, coupled with their tighter cash flow. At the same time, end-user buyers were finding it more difficult to buy

properties on the back of slowing economic growth, already bubbly prices, and higher downpayment requirements due to LTV tightening in 2013.

To confirm our thesis, we looked at the trend of actual marketing sales achievement which is the combined demand from end users and investors vs real demand which is derived from nominal GDP growth. We used 2009 as the basis of our analysis. A similar trend was seen when investors were jumping on the property investment bandwagon in droves during the property boom period and were seen leaving this bandwagon at a steady rate after 2013. Our analysis showed that in 2016, most of the demand was coming from end-user buyers as investors found property investment unattractive.

Proportion of investors for marketing sales achievement

^{*}Aggregate marketing sales of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

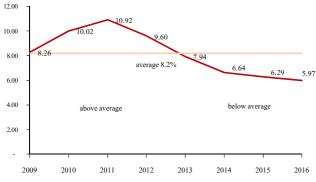

Oversupply to pressure price

Rental yield below its historical average

If someone asked you what is the fair rental yield for, say condominium, what would it be? If you answered that it should be between 7% and 10%, then your guess is right. We looked at Jakarta rental yields and found its 8-year average (2009-2016) is 8.2%.

What about the rental yield trend? Unfortunately the rental yield in 2016 is well below its 8-year average at c.6%. Since the property market slowdown in the second half of 2013, the rental yield has been below its 8-year average. We do not think that rental yield would rebound to above 8% in the near future as we think market demand still needs to catch up with the supply. We believe market demand will be driven by end users rather than investors due to the lack of a premium for property investment, which will be discussed later.

Rental yield of Jakarta apartment (%)

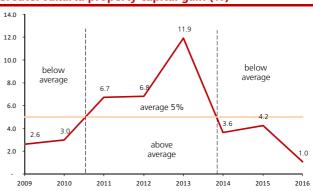

Source: Numbeo, DBSVI

Price appreciation was unattractive

Next, we looked at the capital gain which is realised when the property price increases in value over time. Data from the Central Bank of Indonesia (Bank Indonesia) suggests that over the last eight years, property prices have been in the positive zone with 2013 marking the peak at 11.9%. Over 2011-2013, property prices have increased by 8.5% p.a. on average, far above its 8-year average of 5%. However, similar to rental yields, we also saw capital gain in the last three years (2014-2016) coming in below the average, with 2016 marking the trough at only 1%.

In our view, property price appreciation over the last three years has been below what investors comes to expect after factoring liquidity risks for property investment. Thus, we think that investors will not find property as an attractive investment instrument in the near future.

Greater Jakarta property capital gain (%)

Source: Central Bank of Indonesia, DBSVI

Property premium hit the lowest in 2016

When looking at property as an investment instrument, we have to compare it to another instrument, such as time deposits. Both have the same characteristic of being considered as a safe-haven instrument, as most people believe both will not decrease in value. Property, however, is expected to give significantly higher returns than deposits due to the former's illiquid nature and larger capital outlay involved.

Adding the rental yield with the capital gain gives the total return on property investment. We can see that the total return numbers are trending down in the past few years as both rental yield and capital gain have been declining. The premium of property investment over time deposits even recorded a negative value of 0.16% (which implies a discount). Although the discount is marginal, it just does not make any sense to invest in property when time deposits can offer similar or even better returns.

Return on property investment vs deposit rate (%)

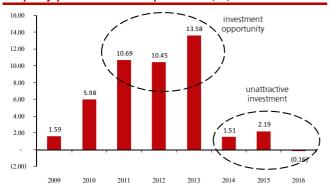

Source: Numbeo, World Bank, DBSVI

In 2009, the property investment premium over time deposits came in at only 1.6% as the impact of the global financial crisis (GFC) was the strongest that year. In 2010, the property market started to recover, partly helped by the global commodity price rebound. During 2011-2013, the premium stood at a high of more than 10% every year. The high demand of property for investment purposes during the period had created what we dub as a 'mini bubble'. After the so-called 'mini bubble' popped, we saw a dramatic decrease in property investment premium, from over 13% to just below 2%. The three reasons behind such a dramatic drop are 1) drop in rental yield, 2) low property price appreciation, and 3) higher deposit rate.

Property premium over deposit rate (%)

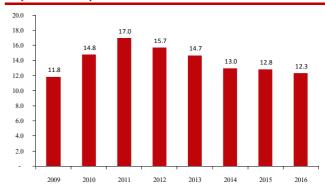

Source: Numbeo, World Bank, DBSVI

The market is facing oversupply of residential units...

Our data shows that rental prices are declining. This implies that there is an oversupply (primary and secondary markets combined) in the property market. We believe a lot of demand for property products during 2011-2013 came from property investors. Such demand can turn into supply when investors decide to cash out their capital gains for their property investments.

Implied rental price index

Source: Numbeo, Central Bank of Indonesia, DBSVI

...and this is expected to continue

We expect property prices to continue to be pressured in the short term, as we still see an abundant supply of property products. We believe that the market oversupply will continue on the back of 1) market optimism on real estate demand, and 2) the incoming wave of foreign developers.

Foreign developer projects to add to supply

Rising trend of foreign projects

In 2016, there was a noticeable increase in the number of projects linked to foreign property developers. The number of such projects launched in 2016 was nine. However, from 2017 onwards (including future projects), we found that there were 17 projects being linked to foreign developers. The high number of launches in the last two years, combined with the weak demand, might put more pressure on the property industry.

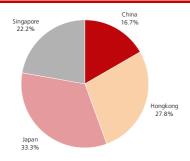

Number of foreign property projects by year

Source: DBSVI

China, Singapore, Hong Kong and Japan are among the names of developed countries that have been building their property empire in Indonesia. Especially in 2016, the number had risen significantly, doubling from 2015. These countries have quite an equal portion in the number of property projects. Based on the number of projects, our data show that Japan leads the number of property projects at 12, followed by Hong Kong and Singapore with ten and eight projects respectively. China lags behind these nations with only six projects. But it is worth noting that of these six projects, one was launched in 2016 and the remainder were launched in 2017.

Foreign developer presence in property projects (%)

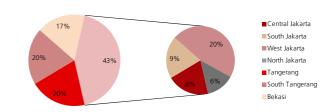

Source: DBSVI

Concentrated on the west side

Looking at the specific numbers on project distribution around the Jakarta area, some parts of Jakarta appear to be more favoured by the foreign developers for property developments. The number of projects situated in West Jakarta and Tangerang areas (west of Jakarta) is significantly higher than that of other parts of Jakarta.

The western part of the Jakarta Greater Area accounts for 60% of total property projects linked to foreign developers. West Jakarta, Tangerang and South Tangerang have an equal share of foreign projects. Each of these areas accounts for 20% of total foreign projects. First, it is worth noting that the Tangerang area has a huge land space which can be developed; and secondly, the Tangerang area is surrounded by infrastructure developments. There are at least three infrastructure projects to be built and one is already underway. This makes the Tangerang area very accessible via central Jakarta. These infrastructure projects include 1) Serpong-Balaraja highway, an extension of JORR – Serpong highway; 2) Soekarno-Hatta – Balajara highway, these two toll road will be connected to Jakarta – Merak highway; and 3) MRT Cikarang – Balaraja.

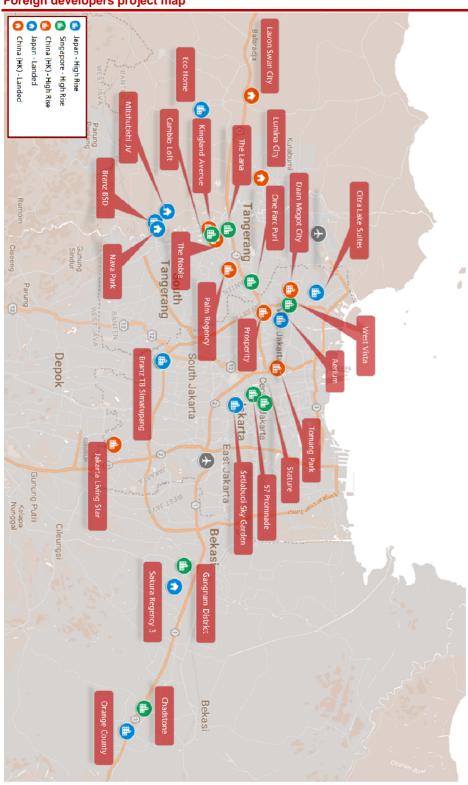

Share of foreign-backed projects by region

Foreign developers project map

Source: Google Maps, DBSVI

Honeymoon is over

Using 2011 as the baseline, we found that the outperformance of the property sector, relative to the JCI, has levelled off in recent times. The property sector had outperformed the JCI from 2011 till mid-2015 due to strong growth during the property boom phase. But the uptrend lasted until mid-2015 on the back of high expectations for the property sector that underpinned by the presidential election.

Just in time to stop the bubble

Despite the controversy surrounding its efforts to limit the growth the property sector by tightening fund disbursement from banks to property developers in 2013, we believe the Central Bank of Indonesia (Bank Indonesia) has done the right thing to prevent the formation of a bubble in the industry.

Was it a bubble in 2013? It had yet to become a bubble as we believe its formation was stopped, as mentioned earlier. Property prices did not crash, like what happened in the US during the 2008 GFC, as non-performing loans stayed at a healthy level. But, looking back to 2013, the property sector index rose by 77% in 1H, followed by a plunge of almost 50% in 2H. It was no doubt a painful fall, but if left unchecked, bubbly conditions for the property market could have taken hold.

Property sector performance in 2013

	DBS	
	property	Growth
	index	
Early 2013	720	
Mid 2013	1,275	77%
Late 2013	652	-49%

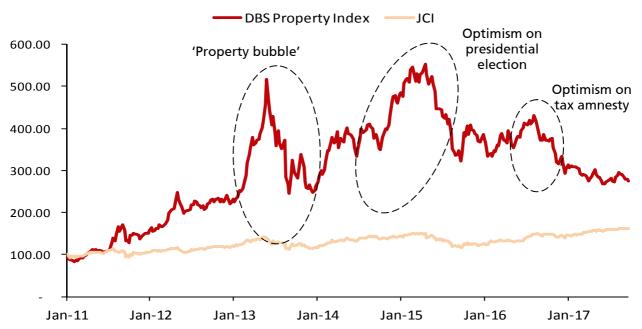

Source: Central Bank of Indonesia, DBSVI

It is hard to see signs that the honeymoon period is over

After the property sector experienced a steep fall in late 2013, this sector outperformed the JCI index once again after Joko Widodo won the presidential election in mid-2014. The market expected that infrastructure development, one of the main focuses of Jokowi, will boost property demand, not knowing that the affordability of property was declining and investors were leaving in droves. They soon realised that marketing sales did not growing during the time.

Moreover, after the government introduced a tax amnesty programme to boost tax revenues, the market again expected the government to save the property sector. But unfortunately this did not materialise as the tax amnesty programme did not translate into high marketing sales achievement.

Property sector index compared to JCI (January 2011 = 100)

Source: Bloomberg Finance L.P., DBSVI Average share price of APLN, ASRI, BSDE, CTRA, LPKR, PWON, SMRA

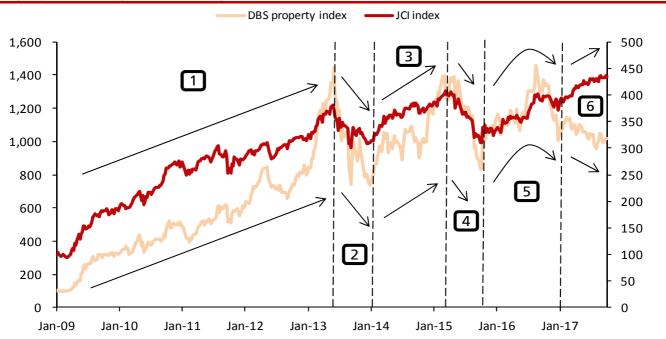

When the market finally realises...

Property sector diverged from JCI for the first time

Since early 2017, the property market has finally shown signs of divergence from the JCl's movement. They have been moving in lockstep since early 2009, after the GFC. However, since the property boom in 2011, the property sector has outperformed the JCl at all times, regardless of whether the sentiment was bad or good. Even when the property market slowed down, the property sector continued to outrun the JCl on the back of euphoria over a potential property boom. It can be seen from the Jokowi effect in 2014 and the rollout of the tax amnesty programme in mid-2016.

The divergence since early 2017 marked the tipping point, i.e. the market was beginning to have an underweight stance on the property sector, following years of disappointment. We believe this trend will not hold for long, as we believe the property sector will track the JCI in the long run. However, we do not expect the property sector to outperform the JCI in the short term, in view of the slow demand growth. A significant demand pick-up could enable the sector to outshine the JCI as the sector has been a laggard since early 2017.

Property sector stock performance compared to JCI

Source: Bloomberg Finance L.P., DBSVI

1. After the 2008 GFC, the property sector, along with the Indonesian economy, experienced solid growth and this was reflected in the share price performance of property stocks. However, from 2012-2013, the property sector has outperformed the JCI when the market believed that the sector's growth will outstrip the underlying economic growth. The optimism resulted in a huge price spike in property stocks (DBS Property Index) from Jan-May 2013, when the index rose 72.4% compared to the JCI which only gained 14.9% over the same period.

Property sector stock performance compared to JCI during 1H13

	BSDE	CTRA	SMRA	ASRI	PWON	LPKR	DPI	JCI
Jan-13	1160	846	955	630	260	1040	815	4410
May-13	2200	1514	1400	1060	420	1840	1406	5069
Δ	89.7%	79.0%	46.6%	68.3%	61.5%	76.9%	72.4%	14.9%

2. The Central Bank of Indonesia did the right thing when it imposed new regulations to stop the property euphoria. The new regulation to tighten LTV and loan disbursement, combined with a slowing economy, has resulted in a free fall of the property sector index in particular and the JCI in general. The DBS Property Index (DPI) and the JCI plunged by 48.5% and 16.9%, respectively, from May 2013 to end-2013. The free fall had resulted in the DPI and JCI dropping by 11.2% and 4.5%, respectively, in 2013.

Property sector stock performance compared to JCI during 2H13

	BSDE	CTRA	SMRA	ASRI	PWON	LPKR	DPI	JCI

Dec-13	1240	718	790	430	265	900	724	4213
Δ	-43.6%	-52.6%	-43.6%	-59.4%	-36.9%	-51.1%	-48.5%	-16.9%

Source: Bloomberg Finance L.P., DBSVI

3. The presidential election in 2014, in which Joko Widodo ended up being elected as the new president, had fuelled the stellar rise of property stocks, no thanks to the market's high expectations. The market believed that the Jokowi programme to accelerate infrastructure development could boost Indonesia's economy as a whole and of course, the property sector in particular. The property sector, apparently in a new phase of euphoria, had outshone the JCI once again by surging 75% relative to the JCI's 28% ascend over the period of Jan 2014 till Feb 2015.

Property sector stock performance compared to JCI amid the Jokowi effect

	BSDE	CTRA	SMRA	ASRI	PWON	LPKR	DPI	JCI

4. Economic conditions failed to improve. Actually, conditions become worse with GDP growth coming in below 5%, the lowest in the last five years. Consequently, the JCI dropped by 22.8% from Feb-Sep 2015, coupled with the property sector's 35.3% plunge.

Property sector stock performance compared to JCI during periods of sluggish economic growth

5. Economic conditions started to improve in early 2015. The JCI and property sector seemed to be chugging along well until the appointment of the new Minister of Finance who was expected to make the tax amnesty programme a success. The market has not moved on from the euphoria in the previous property boom cycle and this had caused the property sector index to outrun the JCI once again, no thanks to expectations of funds stemming from the tax amnesty programme being diverted to real estate. The tax amnesty programme disappointed the market with marketing sales failing to show much improvement. This served as a wake-up call for some market participants who had subscribed to the euphoria of an impending property boom.

Source: Bloomberg Finance L.P., DBSVI

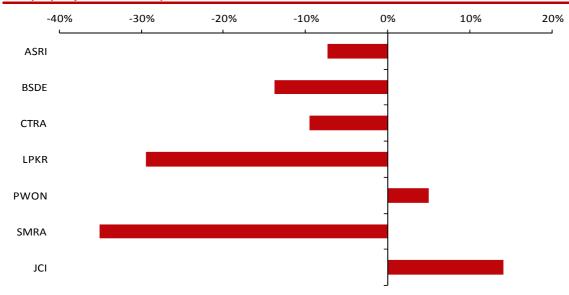

6. From early 2017 till recently (for the first time since 2009), the property sector index has started to diverge from the JCI. We believe the market has grown weary of the property sector, which has failed to deliver material improvements during periods of high expectations in the past few years. We believe the DPI-JCI divergence will continue as the fundamentals of the property sector remain weak.

YTD property stock and JCI performance

Critical factors for property sector

Critical data points to watch

The property sector has been underperforming over the last few years. The most asked critical question is when the sector will (really) recover. Will this take place in the short term or next year? Our analysis suggests that there are three critical data points to watch. They are marketing sales, property price growth, and mortgage rate. Marketing sales and property price growth move in tandem with property counters' share price performance. On the other hand, mortgage rate has an inverse relationship with share price performance.

Our analysis of the three critical factors shows that it will be hard for property sector to recover next year, let alone in the short term. Our view is premised on:

- 1. Marketing sales have improved rather slowly and are still far below the peak level in 2013-2014
- Property price growth has recovered in 2017 but it is still below the expected returns for such an illiquid asset
- **3.** Mortgage rate has been declining but this has not been able to fuel strong demand growth

Marketing sales trend will determine property sector direction

Marketing sales will translate into revenue which in turn will determine the profitability of property companies. Analysing marketing sales trends could probably reveal the general share price direction of property counters.

The declining trend of marketing sales since peak in 2013-2014 has put the sector under pressure. Although demand has recovered in 2017, we are cognisant of risks that could derail the rebound.

The warning signs include:

- Marketing sales have been supported by more land plot sales
- 2. Taking into account the 200bps interest rate cut since 2016, the pick-up in demand appears to be rather slow

With the pick-up in demand expected to be sluggish for the coming years, we believe the share price upside potential for the property counters should be pretty limited.

Marketing sales vs property sector

Source: Company, Bloomberg Finance L.P., DBSVI

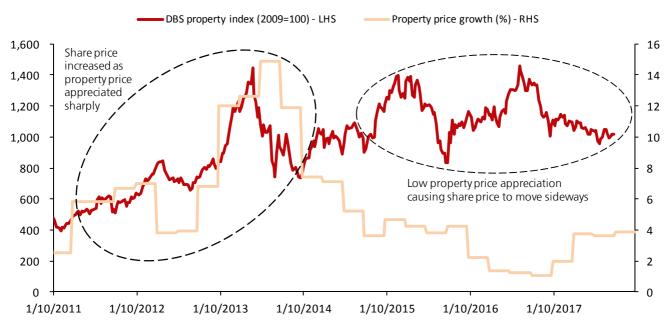

Property price growth does not bode well for share price

We deem property price growth as one of the drivers for the property sector's share price performance. During periods of property boom, property prices will skyrocket as demand outstrips supply. Once the market slows down, property price growth will be sluggish due to the illiquid nature of this asset class

Notwithstanding the positive macro sentiments stemming from the presidential election in 2014 and the tax amnesty programme in 2016, the property sector index has retraced to more reasonable levels to reflect the tepid property price appreciation. We believe property prices will remain muted in the short term, thus limiting any potential share price upside for the sector.

Property price growth vs property sector

Source: Central Bank of Indonesia, Bloomberg Finance L.P., DBSVI

Mortgage rate fails to lift property sector

Theoretically speaking, mortgage rate has an inverse relationship with property demand. Therefore, mortgage rate should also move inversely with the share price of property counters, as higher demand will translate into better marketing sales and thus a higher share price. Historical data has shown mixed results. Anomalies were seen during the episode of the presidential sentiment boost in 2014 and after the disappointment results of the tax amnesty programme.

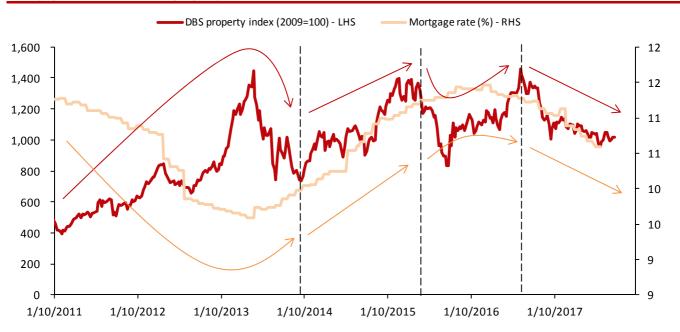

The Central Bank of Indonesia has tightened the LTV ratio and increased the reference rate in 2013, causing the then over-accelerating property sector to encounter some speed bumps. Since then, mortgage rate has gradually increased. Nonetheless, the strong sentiment arising from the

presidential election in 2014 had helped buoy the property sector despite the mortgage rate hike.

Since 2016, the Central Bank of Indonesia has its cut reference rate by 200bps and the mortgage rate has been lowered accordingly. Unfortunately, the share price of property counters has trended down in spite of the mortgage rate cuts. As mentioned earlier, since early 2017, the property sector's direction has finally diverged from the JCI's, by trending down in spite of the broader market's buoyancy.

With limited room for another rate cut, we expect the divergence to continue. Our outlook for interest rate next year in Indonesia revolves around our base-case scenario of one hike by the Central Bank of Indonesia.

Mortgage rate movement vs property sector

Source: Central Bank of Indonesia, Bloomberg Finance L.P., DBSVI

Beware of speed bumps

Boosting property sector via mortgage rate reduction

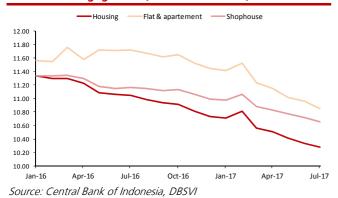

Since 2016, the Central Bank of Indonesia has cut interest rate by 200bps to boost economic growth as well as the property sector. The interest rate cut has translated into lower mortgage rates for all property products. The lower mortgage rate can provide some relief to sluggish property demand. But it also comes with a drawback, i.e. diminished quality of loan disbursement.

Trend of mortgage rate (2011 to mid-2017)

Trend of mortgage rate (2016 to mid-2017)

Non-performing loan trend is at all-time high...

Non-performing loans (NPLs) can be used to gauge whether during property booms, such as the one in 2011-2013, buyers have healthy financial standing or over-leveraged themselves financially. Historical data shows very clearly that after the Central Bank of Indonesia introduced restrictions on the property sector, the NPLs of the property sector trended up. This trend can be seen for high-rise residential and shophouse units, as both are perceived as superior investment vehicles. The NPL increase for landed residential property was less stellar compared to other properties, as end-user buyers tend to buy landed houses for their own occupation. The rising NPL

trend could also be explained by the action of some speculators who bought properties during boom times by over-leveraging their financial position in the hope of making quick capital gains. When property price appreciation decelerates and there is not much real demand to absorb incoming supply, NPLs would naturally head north.

While landed houses have performed better vs high-rise residential and shophouse units in the area of NPLs, the NPL ratio for the landed segment still stood at 2.83% as of end-Jun 2017 – which is above its historical average of 2.49%. As of end-Jun 2017, the NPL for flats and apartments stood at 2.52% while that for shophouse units at 4.51% – the NPL levels were well ahead their respective averages of 1.42% and 2.74%.

The following NPL graph shows that the overall NPL ratio for the property sector is now at an all-time high. Now, you should understand why the Central Bank of Indonesia intervened by increasing the LTV ratio.

Non-performing loans (NPLs) of property sector

Source: Central Bank of Indonesia, DBSVI

...but a full-blown crisis is not anticipated

Fortunately, we have good news to counterbalance all the negative factors highlighted earlier. Despite NPLs being at an all-time high level, we believe that the current property slump will not develop into a crisis, at least not anytime soon. Our thesis is premised on the fact that landed residential units still make up the bulk of property mortgages at 90% as of end-Jun 2017 in terms of value. Recall that the landed residential segment has the best NPL performance in the property sector on a relative basis.

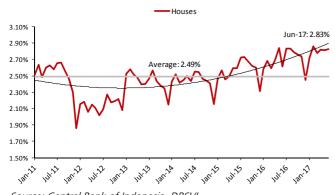

Although the NPL ratios of flats and apartments as well as shophouses are almost double their averages, they contribute only 3% and 7% to total mortgages respectively. Though we

are still far from seeing a crisis, the NPL trends should be monitored closely. The rising trend of NPLs should limit bank mortgage disbursements to the property sector. The government could come up with policies to encourage mortgage disbursements to help the property sector, but

investors need to be cautious of the speed bumps that lie ahead. If such speed bumps materialises, a painful property market crash could potentially await investors who have an overly optimistic stance on the property sector.

Negatives not fully reflected in share price

Performance gap is narrowing

Based on the 2011 average share price, property stocks still outperformed the JCI as of end-September 2017. This is mainly due to the significant 169% jump in the DBS Property Index (DPI) during the 2011-2013 property boom period, while JCI only rose by 23% over the same period. Since early 2015, we found that property stock prices have steadily underperformed the JCI, thus narrowing the DCI outperformance gap driven by the property boom. We expect the sector to continue underperforming given its weak market outlook in the near future.

Average share price of property sector and JCI (2011=100)

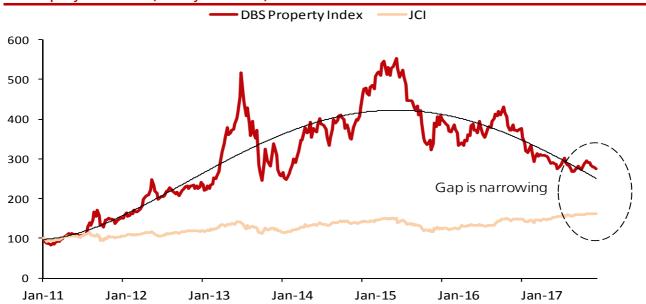

Source: Central Bank of Indonesia, DBSVI

Discount to RNAV in the last five years still lower than 2008-2009 period

We found that the last 5-year average discount to RNAV is still lower than in the 2008-2009 period when the Global Financial Crisis occurred. Even though we do not expect the discount to reach a new all-time high, as the current economic conditions are obviously better, there is still room for the share price of property counters to be discounted even further from the current levels.

There is a significant gap between the current and recordhigh discount to RNAV for ASRI, BSDE, and SMRA. These developers are focused on developing the Tangerang area. In our view, the significant land price appreciation in the Serpong area during the previous property boom had worked in the favour of these three players, as most of their assets had increased in value. PWON's discount to RNAV is the lowest among property developers because it has been the preferred stock during times of weak marketing sales achievement. Note that PWON enjoys the privilege of deriving half of its revenue from its investment properties.

SMRA's historical discount to RNAV

Property sector is currently trading at +1SD discount to RNAV

The property sector is currently trading at a cheap valuation level, at +1SD of its 5-year average Discount to RNAV. Marketing sales have improved in 2017, but still below what everyone had expected last year. We believe the sector has been punished by the disappointment over the tax amnesty programme. The programme was expected by most people to boost property demand but unfortunately the huge spike did not materialise.

Discount to RNAV has been moving in 2SD band over the past five years

Although the sector appears to be cheap, its historical discount to RNAV suggests otherwise. Strong support/resistance levels are apparent at the +/-2SD levels (relative to the 5-year average for discount to RNAV). Only the property boom in mid-2013 had resulted in the -2SD level being meaningfully broken.

As the sector is trading at +1SD discount to RNAV, we believe there is still potential downside for the sector – especially after the negative sentiment due to the tax amnesty programme letdown had pushed the sector's discount to RNAV to near +2SD. The downside potential, however, is capped at the +2SD support level, in our view.

Discount to RNAV band

Stock pick - defensive stock

We believe defensive stocks is a safe bet when demand slows

Our main top pick is BSDE, as it appears to enjoy competitive advantages arising from its strong balance sheet and profit margins. Coupled with its huge land bank, we believe BSDE could still do well in a weak demand environment.

We prefer high operating margins that can offset future revenue weakness...

We expect revenue from development properties to trend down, in tandem with the marketing sales trend in the past few years (the impact depends on the proportion of development properties vs investment properties). As such, we prefer companies with high operating margins to offset the impact of lower revenue for maintaining profitability.

We noticed that during periods of property slowdown ASRI, BSDE and PWON's operating margin outperformed its peers. ASRI and BSDE's margin were helped by their land plot sales, which yield high margins given that such land plots were acquired a long time ago. PWON's margin was above the average due to of the fact that half of its revenue is recurring income and it is involved in upmarket developments.

...and low gearing to maintain healthy cash flow...

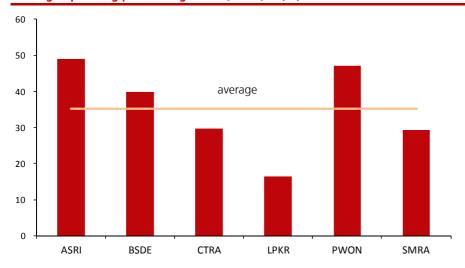

During slow demand environments, high gearing will not only weigh on to a company's earnings, but also limit its expansion and flexibility in setting terms of payment. To accommodate growth, developers need to sell the right products to the right segments. This can be achieved via new product launches or more appealing terms of payment, in our view. Both options come with cash flow burden that could lead to developers needing a capital injection to top up working capital.

Our top pick, BSDE has a strong balance sheet by virtue of its lowest net gearing among peers. This allows the company to launch new projects and give more attractive terms of payment without putting too much strain on its cash flow.

...with huge land bank to support both margins and gearing level

With a huge land bank, BSDE can sell land plots to maintain its profit margins and net gearing levels at the same time. Given that most of its land bank is located in the BSD city area, most of its asset value has been unlocked by the first two development phases, in our view.

APPENDIX

Appendix 1: Foreign ownership regulation

Equality in high-rise residential unit ownership

The latest media reports suggest that government is, once again, planning to relax the foreign ownership rules for properties in Indonesia by allowing foreigners to own the 'right to build' title (i.e. Hak Guna Bangunan). This allows foreigners to have the same level of ownership rights as local citizens as the previous 'right to use' title (i.e. Hak Pakai) was perceived as being inferior to the 'right to build' title. Banks also prefer to have 'right to build' rather than 'right to use' titled as collateral, thus reinforcing the inferiority of the 'right to use' title. There is no information on title changes for landed residential properties yet. Even if foreigners are allowed to have the 'right to build' title for landed houses, it would still be inferior to the 'right to own' title which can only be obtained by local citizens.

Will this new title right be implemented?

We believe the plan to implement the relaxation of foreign ownership is still in the early stages as the draft regulation needs to be discussed in parliament. To give foreigners the 'right to build' title also contradicts the Basic Agrarian Law (UUPA No. 5 / 2016), which was inherited from Netherland's laws. We believe the implementation will not be as easy as creating another Ministry of Agrarian and Spatial Planning Regulation, like what the previous relaxation entailed. The government needs to amend the Basic Agrarian Law as Article 36 No.1 states that only the following entities may possess the 'right to build':

- 1. Indonesian citizens
- Indonesian corporations that are domiciled in Indonesia

Will the new regulation boost property demand?

Even if the new regulation to give foreigners the 'right to build' title is implemented, we believe that it will not have a significant impact on property demand. Our concerns revolve around 1) the 'right to use' title is not a factor that is holding back property purchases by foreigners, and 2) the additional potential demand from foreigners is not high to begin with.

'Right to use' title is not holding back property purchases by foreigners

Based on our channel checks, we believe that foreigners' concerns over buying properties in Indonesia revolved around the restriction on selling their properties if they lose their right to buy (i.e. not working in Indonesia anymore) for a grace period of one year. This restriction, combined with the

minimum price rule, has created a potent hurdle for foreigners in purchasing property, in our view.

This restriction, however, is in line with the government's intention to ensure adequate local demand by limiting the ability of foreigners to buy properties for investment/speculative purposes. It will prevent property prices from reaching bubbly levels due to investment by foreigners, thus giving rise to more healthy demand in the long run. As long as this restriction is intact, we believe the regulation to allow foreigners to have the 'right to build' title will not have a significant impact on property demand.

The additional potential demand is not high to begin with

According to the Ministry of Manpower, there were 74,183 foreign workers in Indonesia as of end-2016. Although there could be many more that came through illegal channels, we believe that only legal workers are permitted to buy property. The 74K foreign workers only constitute c.0.05% of total Indonesian workers. The number of foreign workers may look small at first glance but the number can be quite significant if translated into value.

Assuming that all the 74K foreign workers buy apartments at the minimum price in Jakarta, which is Rp3bn, it would generate sales of more than Rp200tr. This might not be translated directly to marketing sales, considering that the Agrarian and Spatial Planning Minister's Regulation 29/2016 allows foreigners to buy secondary properties. Unfortunately, we do not think property demand from foreigners will surge as: 1) not all foreigners want to stay permanently in Indonesia, and 2) there is no significant difference between the 'right to build' and 'right to use' titles.

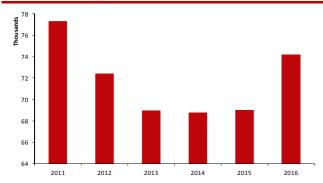

As mentioned earlier, the government's restriction on foreign purchases of properties has led to low foreign ownership. Foreigners can pose significant liquidity risks when they lose their right to buy (i.e. returning to their home country). In such cases, they will be forced to transfer their ownership within one year. Considering that there is a minimum price for properties that they can own, it can be difficult for them to sell their properties within one year. We would also like to highlight that the accommodation of most foreigners is paid by their employers. This significantly reduces the need of foreigners to buy their own abodes.

We believe that there is no significant difference between the 'right to build' and 'right to use' titles, as both: 1) have a

limited lifespan, 2) can be used as collateral, and 3) can be transferred/sold.

Peaking out in 2018

Strong performance is expected in 2018 but going south afterwards

ASRI booked a 3Q17 net profit of Rp406bn (-24% q-o-q, +247% y-o-y) on strong recognition from its Kota Ayodhya apartment and Suvarna Sutera township. We expect the performance to remain strong, if not better, in 2018 due to its backlog recognition of 2014 and 2015 marketing sales as well as the expected marketing sales of its office tower, The Tower, in 4Q17. However, we expect its performance to depend on its land plot sales to CFLD going forward, as marketing sales are on a declining trend.

Where we differ: Maintain our neutral view on the company Our view on the stock is unchanged as we believe demand for property is still muted for the time being. We believe ASRI's marketing sales (excluding land plot sales to CFLD) will grow at a steady rate.

Potential catalyst: Missing its marketing sales target

The company guided Rp5tr marketing sales this year, a significant jump from Rp3.4tr last year on the back of land plot sales to CFLD and The Tower office sales which are expected to be booked in 4Q17. If this failed to materialised, it could justify our valuation.

Valuation:

Our target price of Rp400 (previously Rp390) is at a 44% discount (its 5-year average) to our base-case RNAV. ASRI is currently trading at a 44% discount to RNAV. We maintain our HOLD call as we believe ASRI is trading at a fair level.

Key Risks to Our View:

Pasar Kemis township development to take off soon, as ASRI entered into a definitive agreement with subsidiaries of industrial city developer China Fortune Land Development on 22 June 2016 to co-develop a block of land in Pasar Kemis. Over the long term, given the more comprehensive development plan, the land value in Pasar Kemis could appreciate faster than we currently expect.

WHAT'S NEW

Peaking out in 2018

Strong 3Q17 performance from high recognition of both high rise and landed projects

ASRI booked a 3Q17 net profit of Rp406bn (-24% q-o-q, +247% y-o-y) on strong recognition from its apartment and landed residential units. ASRI recognised 659 landed houses and 1,061 high-rise units during the quarter. Apartment and landed residential projects generated revenues of Rp708bn and Rp490bn, respectively – when combined, amounted to 81% of its 3Q17 revenue. The bulk of landed house revenue came from its Suvarna Sutera township, while the Kota Ayodhya project that was launched in 2014 is its main highrise revenue contributor.

This brings 9M17 revenue to Rp3.2tr and net profit to Rp1.1tr. 9M17 revenue represents 80% and 93% of our and consensus estimates, respectively, with net profit already trumping our and consensus FY17 estimates.

Normalised margin from the absence of land plot sales

Margins declined to 48% from 79% last quarter due to its high recognition of high-rise units and the absence of land plot sales, which always deliver high margins when they are recognised.

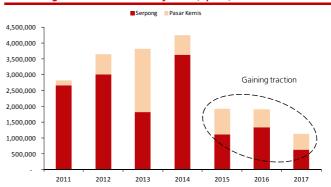

Strong performance is expected until 2018

We expect the performance to remain strong, if not better, in 2018 due to its backlog recognition of 2014 and 2015 marketing sales as well as the expected marketing sales of its office tower, The Tower, in 4Q17. However, we expect its performance to depend on its land plot sales to CFLD going forward, as marketing sales are on a declining trend.

Pasar Kemis gains traction

Historically, ASRI booked most of its revenue from its residential township in Serpong area. ASRI launched its second biggest residential township in Pasar Kemis in late 2011. Its consistent contribution (excluding the spike in 2013 from its Suvarna Sutera grand launch) has supported ASRI's performance over the past few years. This was more so when land prices in Serpong area skyrocketed during 2011-2013, Pasar Kemis has become the affordable second option in ASRI's portfolio.

Marketing sales achievement by area (Rp bn)

Source: company, DBSVI

Despite the controversy over its decision to sell part of its land in Pasar Kemis to China Fortune Land Development (CFLD), ASRI's Pasar Kemis township is doing well with 9M17 marketing sales reaching Rp509bn or 40% of its total 9M17 marketing sales. Compared to the same period last year, Pasar Kemis' project marketing sales rose by 38%. Compared to the Serpong township that recorded a 34% decrease from Rp948bn in 9M16 to Rp628bn this year, the Pasar Kemis township has outperformed Serpong area in terms of growth.

We believe the growth in Pasar Kemis is partly due to the Lavon project which started its marketing campaign in 2Q17. The campaign by Lavon has made Pasar Kemis area more exposed to buyers from Jakarta, in particular, and Indonesia, in general.

Outlook

FY17F/FY18F earnings revised by +48%/+28%

We revised ASRI earnings forecast by +48%/+28% to account for higher recognition from land plot sales and The Tower office, lower operating and tax expenses.

Marketing sales to reach Rp3.7tr

We expect ASRI to book Rp3.7tr marketing sales (excluding the potential land plot sales to CFLD) in FY17, lower than management's guidance of Rp5tr.

Net gearing stabilized at 0.8 level

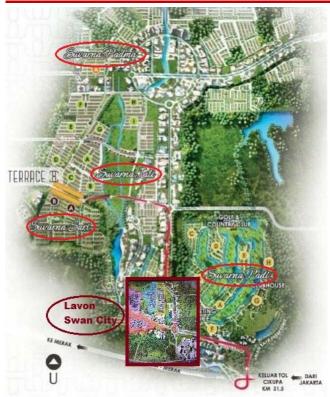

ASRI net gearing stood at 82% as of September 2017. A gradual decline is seen from its peak at 113% in 3Q15 thanks to its cash generated by its land plot sales to CFLD.

Valuation

Our target price of Rp400 (previously Rp390) is at a 44% discount (its 5-year average) to our base-case RNAV. ASRI is currently trading at a 44% discount to RNAV. We maintain our HOLD call as we believe ASRI is trading at a fair level.

CRITICAL DATA POINTS TO WATCH

Critical Factors

Marketing sales achievement

Property developers recognise non-recurring revenue from marketing sales in the prevailing years. Marketing sales are expected to improve, helped by the cooperation agreement with China Fortune Land Development in Pasar Kemis despite the weak demand in the Indonesian property market. Its 2nd township Pasar Kemis (about thrice the size of its maturing Serpong township and located 17km from Serpong) is expected to be the key marketing sales growth driver going forward.

Limited growth of recurring revenues from investment properties ASRI generated c.10% of consolidated revenue from investment

properties such as retail malls, office leases and cultural parks.

Despite expectations of strong growth for cultural park revenue from Garuda Wisnu Kencana (GWK) in Bali, we see limited impact on recurring income from the current levels.

Unusually high profitability margin is not sustainable going forward

ASRI's marketing sales have been mainly driven by the sale of commercial block land in the Serpong township for the past two years, as ASRI has to generate more cashflow to serve its current debt. Given the expected change in product mix going forward, the all-time high consolidated gross profit margin of 74% in 2015 is not sustainable and is expected to decline sharply back to the normal level of c.60%.

Need to monitor costs

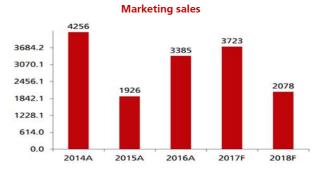

SG&A expenses (as a % of revenue) have trended up with sharp increases in key components (i.e. salaries, wages & allowances). Good control of SG&A expenses is crucial if the developer wants to grow earnings during this challenging period.

Potential value from Bali cultural park development

ASRI acquired Garuda Wisnu Kencana (GWK) in 2012 and is still working on the master plan for GWK because it has to first complete the huge statue inside the cultural park. There is potential upside from the area of c.30ha surrounding the cultural park. Currently, we are assigning a minimum value to this development in our RNAV calculation.

Unrealised forex gain/loss might cause wide earnings swings

Although the US\$ global bonds are hedged to maturity, ASRI faces staggering unrealised forex losses if the IDR continues to weaken against the US\$ (as shown in FY15, where most of its operating income was wiped out).

Appendix 1: A look at Company's listed history – what drives its share price?

Marketing sales (ex JV land plot) as critical factor to BSDE share price

Source: Company, Bloomberg Finance L.P, Company, DBSVI

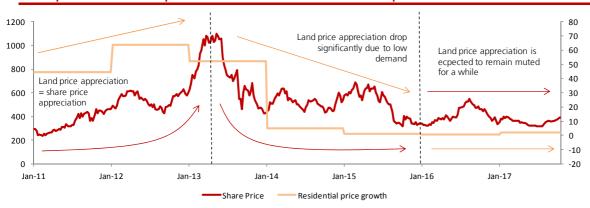

During 2009 – 2015, ASRI's marketing sales increased at 47% CAGR. Most of its sales came from Serpong area. But in late 2011, it launched a new township in Pasar Kemis that boosted the project's revenue contribution (the highest was 50% in 2013 due to its grand launch). The share price rose accordingly in anticipation of strong growth for ASRI's marketing sales. However, the share price dropped in mid-2013 due to weak economic conditions.

In 2016, the share price rose on the back of high expectations for the tax amnesty programme in accelerating the property

industry's growth back to the pace in boom times. However, the expected growth did not materialise as the property take-up rate was still slow post tax amnesty programme.

Excluding land plot sales to CFLD, we expect marketing sales to grow to Rp3.7tr due to its sales of 'The Tower' office tower. If ASRI can meet our expectation for marketing sales, this can help push the share price north of the current level. However we believe real demand for residential property developers will remain muted therefore put pressure on ASRI share price.

Share price movement depends on Alam Sutera's residential land price

Source: Bloomberg Finance L.P, Bl, Company, DBSVI

As one of the biggest township developers in Serpong area, ASRI gets most of its value from residential land price appreciation in Serpong. During the property boom, the Serpong area, including ASRI's township, experienced significant appreciation due to high demand for affordable living space near Jakarta and also from investors wanting to reap the benefits of land price increase.

The land price appreciation has decelerated due to weak demand arising from a weak economy and the onset of selling activities by investors. As a result, ASRI's share price fell by more than half.

We expect no significant improvement in ASRI's residential land price appreciation in the near future. This muted land price appreciation is also likely to put a lid on ASRI's share price upside in the near term.

Balance Sheet:

Net gearing to remain at high level

ASRI has been gearing up since 2012, when it decided to raise US\$ bonds at a high coupon rate for aggressive acquisitions (i.e. Pasar Kemis township and cultural park Garuda Wisnu Kencana in Bali). Despite completing the buyback of US\$150m high-yield bonds, the large capex required for its existing high-rise projects means that ASRI has to drawdown more loan facilities. Therefore, net gearing will still hover close to 90% for the next

Therefore, net gearing will still hover close to 90% for the next few years. As of 9M17, ASRI's net gearing was 80%.

Share Price Drivers:

Marketing sales achievement and pipeline

Marketing sales achievement is a good indicator for all the Indonesian property developers (including ASRI), as it acts as a forward signal for revenue generation over the next 2-3 years (depending on the revenue recognition).

Possible increase in hedging cost from US\$ debt

ASRI is exposed to IDR weakness due to its global US\$ bonds. Despite recent efforts to trim its expensive debt and existing hedging instruments, ASRI still has US\$480m worth of bonds on its balance sheet; it has hedged the principal through call spreads (up to IDR14,500). Hedging cost could rise to beyond reasonable levels if the USD/IDR exchange rate breaches the call spread.

Key Risks:

Stricter regulations for high-rise developments. Plot ratio approval and balanced ratio rules, when strictly implemented, could potentially slow property demand. Liquidity tightening could dampen demand further.

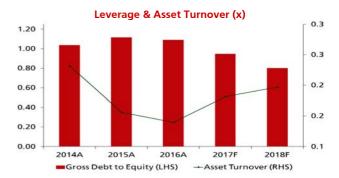

Potential interest rate hike. Property demand is sensitive to and is negatively correlated to interest-rate movements.

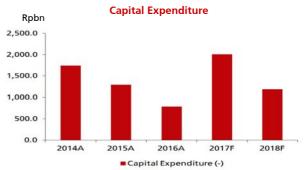

Exposure to US\$, both financially (i.e. debt in balance sheet) and operationally (i.e. higher material costs, especially for highrise projects with higher US\$-linked items) is a risk if the IDR weakens against the US\$.

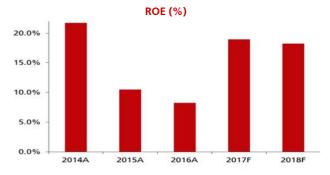

Strict implementation of potential revisions to housing development balance ratio (for low-end, mid-range and luxury houses). If such revisions are implemented strictly and retroactively, this could potentially mean additional costs for property developers and more complicated property development planning.

Company Background

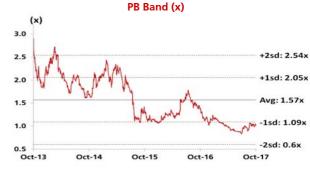

ASRI is an upscale township developer in Serpong and Pasar Kemis (west Jakarta suburb). It is diversifying its revenue base to achieve higher sales for commercial properties such as retail malls and office towers.

Still rolling despite weak demand

Marketing sales supported by landplot sales. We expect BSDE to book marketing sales of Rp7.1tr this year, up from Rp6.46tr in our previous forecast, on the back of commercial land plot sales. While the property sector is still sluggish, we believe BSDE will remain attractive due to: 1) its cheap valuation (at +1.5SD discount to RNAV of its historical value), 2) more commercial land plot sales to boost its marketing sales as well as faster development progress for its BSD city, and 3) strong balance sheet.

Where we differ

We are forecasting higher FY17 bottom-line at Rp3.3tr compared to consensus' Rp2.7tr on the back of sales from commercial land plots. We believe BSDE will experience superior margin relative to its peers from revenue mix and faster recognition from its land plot sales.

Potential catalyst

We believe more JV developments and faster progress for its toll road construction will unlock BSD's area land value faster than its peers. More stable political conditions post Jakarta governor election will also boost the confidence of property buyers.

Valuation:

Our target price of Rp2,105 is at a 48% discount to our base-case RNAV (based on its 5-year average). BSDE is currently trading at a 57% discount to RNAV, a 1.5 SD discount over its 5-year average.

Key Risks to Our View:

Weaker property affordability, potential increase in interest rate and stricter implementations of high-rise developments could lead to delays in its launch pipeline and cause marketing sales to fall short of our expectations.

WHAT'S NEW

Huge landbank has supported BSDE in weak demand environment

Higher marketing expenses dragged 3Q17 earnings. In 3Q17, BSDE booked Rp1.6tr revenue (+17% y-o-y, -34% q-o-q) and this brings 9M17 revenue to Rp5,827 – meeting 65% and 58% of our and consensus full-year estimates. Gross margins remain strong at 72% but pretax margins hit 25%, the lowest since 2011 on the back of higher selling expenses recorded in the quarter. Selling expenses rose 149% y-o-y and 132% q-o-q, no thanks to the surge in advertising, promotion, and commission expenses.

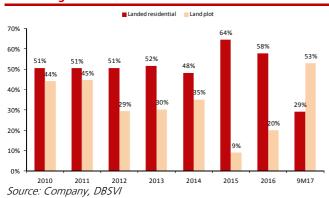

Selling expenses as a percentage of revenue

Source: Company, DBSVI

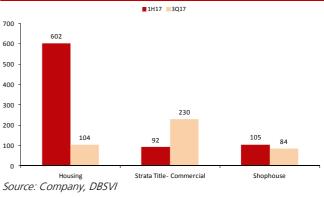

More land plot sales boost marketing sales achievement. BSDE booked Rp2.3tr marketing sales in 3Q17 with 69%, or Rp1.57tr, coming from two units of commercial land plot sales. This brings its 9M7 marketing sales to Rp4.8tr (66% of FY17 target of Rp7.2tr). Management has guided for at least Rp1tr marketing sales being booked in 4Q17 from its land plot sales. If the target of its Price Lock marketing programme (that aims to rake in Rp1tr marketing sales each month or Rp3tr in total) is achieved, BSDE might book higher marketing sales than its FY17 target.

Marketing sales contribution

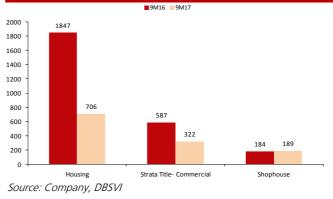

However we saw weakness in property demand in the third quarter – especially landed houses which saw only 104 units sold in three months or only 17% of its 1H17 achievement. With 84 units of shophouses being sold in the same period, the house to shophouse ratio was close to 1, which is not good in the long term, in our opinion. Good take-up was seen in strata title sales – 230 units sold, giving Rp150bn marketing sales. We believe most of the units sold came from Akasa or other the lower-end apartment segment in the BSD area.

3Q17 units sold compared to 1H17

Weak y-o-y volume growth. There were fewer units sold recorded across residential products in 9M17 compared to the same period last year. Landed residential unit sales dropped by 62% y-o-y while high-rise residential unit sales dropped by 45%. We saw resilient sales rates for shophouses which were flat y-o-y. Thus, the shophouse to house sales ratio dropped to 1:4 in 9M17 from 1:10 in 9M16.

9M17 units sold compared to 9M16

Lower appetite for project launches. We see lower appetite for project launches in 2017 compared to 2016. We looked at the comparison between cluster Piazza (launched in Nov 2016) with cluster Avezza (launched in Jun 2017) and cluster Askara (launched in Jul 2017). The three clusters are located in Mozia and Vanya Park, both in BSD city. We would also like to note that Piazza is a mid-rise (same title with high rise) development while Avezza and Askara are landed property developments.

Comparison between launches

Cluster	Project	Launch date	Land area (sqm)	Building area (sqm)	Lumpsum price (Rp bn)	1st day take-up
Piazza	Mozia	Nov-16	35 - 50	103 - 139	1.3 - 1.8	65%
Avezza	Mozia	Jun-17	60 - 105	73 - 116	1.3 - 2.2	57%
Askara	Vanya	Jul-17	66 - 123	60 - 150	1.2 - 3.0	51%

Source: Company, DBSVI

Price Lock promotion

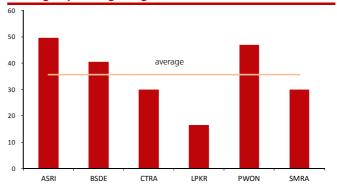

BSDE has recently launched a marketing campaign called "Price Lock" to grow marketing sales in 4Q17. BSDE is targeting to clinch Rp3tr marketing sales (Rp1tr/month) from the "Price Lock" marketing programme. The category 1 programme is similar to a balloon payment scheme but is limited to kavling, Aerium apartment, East Indonesia, and Batam projects only. The category 2 programme is akin to last year's programme, "Price Amnesty", but is only applicable to ready stock units and hard cash or express mortgage payments (30% DP). Overall, we see the new marketing programme of "Price Lock" being less attractive than last year's "Price Amnesty" programme that helped rake in Rp2.1tr marketing sales in 4Q16.

Strong in profitability and low leverage

BSDE margin is still decent. During the property market slowdown since 2014, BSDE recorded a decent operating margin of 41%. We believe BSDE's margins will remain strong, as its old and huge landbank in BSD city will still be the main contributor to its revenue.

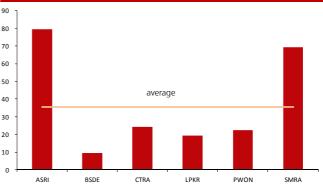

Strong balance sheet to ride property cycle. We believe BSDE's strong balance sheet is one of its key competitive advantages during property slowdown cycles. As of end-June 2017, BSDE net gearing stood at 10%, the lowest among its peers.

Average operating margin since 2014

Source: Bloomberg Finance L.P, DBSVI

Net gearing position as of end-June 2017

Source: Bloomberg Finance L.P, DBSVI

Valuation

FY17F/Y18F earnings revised by +55%/+3%. We revise up our FY17F earnings by 55% to account for land plot sales recognition. As of Sep 2017, BSDE earning represents 69% of our FY17 forecast. We expect the Rp1.5tr commercial land plot sales to be booked in the 4Q17.

Maintain BUY with a new TP of Rp2,105. We adjusted our RNAV from Rp4,583/share to Rp4,046/share after imputing slower take up rate and lower land price appreciation. We maintain our BUY call on BSDE with a new target price of Rp2,105. Our TP is at a 48% discount to our base-case RNAV (based on its 5-year average). BSDE is currently trading at a 57% discount to RNAV. At the current price, BSDE trading at +1.5SD discount to its 5-year average.

CRITICAL DATA POINTS TO WATCH

Critical Factors

Marketing sales

We believe marketing sales will continue to be BSDE's share price driver. Any marketing sales surprise will affect its share price movement. We expect marketing sales to grow at 14% to Rp7.1tr in FY17.

BSD City still has 3,000ha of landbank (good for another 25-30 years of development), and that will remain the major driver of marketing sales going forward. We expect BSD City to continue to contribute more than 60% of total marketing sales, albeit slipping going forward with the emergence of other projects.

BSDE has also started to expand outside Greater Jakarta with ventures in East of Indonesia cities such as Benowo (East Java), Balikpapan and Samarinda (East Kalimantan).

Growing recurring revenue from investment properties

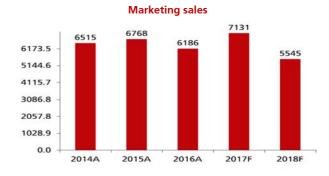

BSDE generated c.18% of its consolidated revenue from its investment properties such as retail malls, hotel and office leases. The recent addition of several investment properties points to BSDE's intention to beef up this proportion to c.20% over the long term to ensure earnings sustainability.

Better revenue mix will lead to better margins

BSDE's revenues are still heavily reliant on the sale of landed residential houses which had commanded high gross profit margins (>70%) in the past two years. We expect consolidated gross profit margins to stay above 70% for the considerable future as there will be no significant changes to BSDE's revenue mix.

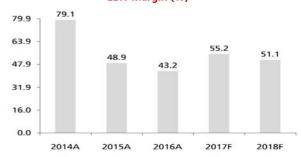

Good control of operating costs

BSDE has been able to keep SG&A expenses (as a % of revenue) under control, as it needs to juggle the cost and benefits of boosting property demand during the current stale market. Good control of SG&A expenses is crucial to maintaining profitability in this challenging period.

Appendix 1: A look at Company's listed history – what drives its share price?

Marketing sales (ex JV land plot) as critical factor to BSDE share price

Source: Company, Bloomberg Finance L.P, Company, DBSVI

During 2009 – 2015, Bumi Serpong Damai's marketing sales (excluding JV land plot sales) increased at 31% CAGR. Most of its sales came from Serpong area which at the same time experienced enormous land appreciation. The share price rose accordingly in anticipation of strong growth. However, the share price dropped in mid-2013 due to weak economic conditions.

In 2016, the share price rose on the back of high expectations for the tax amnesty programme in accelerating the property

industry's growth back to the pace in boom times. However, the expected growth did not materialise as the property take-up rate was still slow post tax amnesty programme.

After the tax amnesty programme disappointment, the share price moved sideways. We expect marketing sales to grow slightly to Rp6.3tr (excluding Rp840bn JV land plot sales). If our moderate expectation for marketing sales materialises, this can help push the share price north of the current level.

Share price movement depends on BSD City's land price

Source: Bloomberg Finance L.P, BI, Company, DBSVI

We see land price in BSD City as one of the factors that drive BSDE's share price. This is in line with its marketing contribution with c.70% being driven by BSD City projects. During property boom periods, property prices tend to appreciate significantly as demand outstrips supply. At the same time, BSDE's share price will also significantly increase. BSDE's share price appreciation has decelerated during periods of property slowdown, as BSD City's land price appreciation moderates somewhat.

We believe the demand for BSD City properties will remain sluggish, therefore limiting the land price appreciation. At the end of the day, any share price appreciation will remain muted in the short term.

Bumi Serpong Damai

Balance Sheet:

Healthy balance sheet despite gearing up

BSDE had been in a net cash position from 2008 to 2013, as strong cash generation outpaced annual capex requirements. The aggressive fund-raising (for the opportunistic purpose of either investment properties or landbank acquisition) has boosted its balance sheet strength but it is still in a manageable net debt position (15% net gearing as of end-3Q17).

Exposure to US\$ debt balanced by US\$ holding

BSDE's balance sheet is exposed to USD/IDR volatility after the issuance of 5-year US\$200m bonds (at 5.5% annual coupon rate), which represents c.50% of its interest-bearing debt. However, BSDE's large cash position enables it to have sufficient US\$ in cash balance to lessen accounting non-cash forex burden.

Share Price Drivers:

Marketing sales achievement and pipeline

Marketing sales achievement is a good indicator for all Indonesia property developers (including BSDE) as it is a leading indicator of revenue generation over the next 2-3 years (depending on the revenue recognition).

Key Risks:

Stricter regulations for high-rise developments. The plot ratio approval and balanced ratio rules, when strictly implemented, could potentially slow property demand. Liquidity tightening could dampen demand further.

Potential interest rate hike. Property demand is sensitive to and is negatively correlated to interest-rate movements.

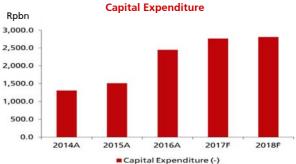

Exposure to US\$, both financially (i.e. debt in balance sheet) and operationally (i.e. higher material costs, especially for highrise projects with higher US\$-linked items) is a risk if the IDR weakens against the US\$.

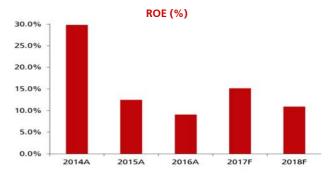

Strict implementation of potential revisions to housing development balance ratio (for low-end, mid-range and luxury houses). If such revisions are implemented strictly and retroactively, this could potentially mean additional costs for property developers and more complicated property development planning.

Company Background

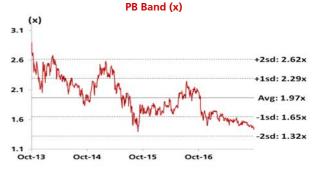

BSDE is Indonesia's largest landed residential property developer. Its core project is the development of an integrated satellite city 15km west of Jakarta. BSDE has enlarged its investment property portfolio after consolidating DUTI, SMT and SMW.

Fairly priced

Earnings recovered from lower expenses albeit lower gross margins from negative margins in apartment segment. Ciputra Development (CTRA) booked 3Q17 net profit of Rp227bn (+84% q-o-q, -6% y-o-y). Key result highlights are as follows: The lower SG&A expenses recorded was expected due to seasonality. However, gross margin was low at 44.5% (the lowest since 2010) due to losses in apartment segment (-5% margin) combined with lower margin of office and shopping centers, partly offset by higher margin in land lot segment.

Where we differ: Contrary to consensus bullish view. We believe consensus is overestimating the recovery in property demand. We maintain our HOLD call as we expect demand will grow at a slow pace next year.

Potential catalyst: Lower than expected marketing sales achivement. Despite the optimism in the property sector this year, our concern of weak demand still holds. We are expecting a less stellar improvement in marketing sales at 9% y-o-y, which is lower than the company's guidance which expects marketing sales to grow by 18% to Rp8.5tr.

Valuation:

We value CTRA using RNAV and arrive at a TP of Rp1,190 which is based on 29% (pegged to its 5-year average) discount to our base-case RNAV. Our RNAV of Rp1,675 is revised from Rp2,042 previously as we adjusted our take up rate and ASP growth assumptions. We maintain our HOLD call as CTRA is currently trading at 30% discount to our base-case RNAV.

Key Risks to Our View:

Faster than expected demand recovery especially in Greater Jakarta, Greater Surabaya, and Sulawesi (together they contributed 80% of 9M17 marketing sales) could push CTRA's share price higher.

WHAT'S NEW

Haunted by weak demand

Earnings boost despite lower margin

CTRA booked 3Q17 net profit of Rp227bn (+84% q-o-q, -6% y-o-y). Gross margin was low at 44.5% (lowest since 2010) due to loss (-5% margin) in apartment segment combined with lower margin of office and shopping center segment, partly offset by higher margin in land lot segment. Office margin dropped to 31% from 41% in previous quarter while shopping center margin dropped to 55% from 72%.

The Rp227bn net profit in 3Q17 brings CTRA's 9M17 earnings to Rp566bn (+18% y-o-y), representing 53% and 66% of our and consensus estimates respectively.

Weak demand

Supported by service apartment bulk sales to Ascott

As at 10M17, CTRA had booked Rp6.2tr marketing sales, a 7% increase over same period last year. This represented 87% of the 10M17 target, helped by its North West Hill project in Citraland Surabaya and bulk sales of service apartments in CWJ 2 to Ascott. Excluding pre-sales to Ascott, CTRA's marketing sales achivement would come in at 78% of its target. However, despite pre-sales to Ascott, CTRA's 10M17 marketing sales of Rp6.2tr still lags behind (73%) its FY17 target of Rp8.5tr.

Needs more cash

Gearing is creeping up

Despite its strong cash position of Rp4.3tr as end of Sep-17, CTRA's net gearing stood at 27%, slightly below its policy of a maximum 30%. CTRA's net gearing has increased from 20% as of Mar-17 due to its new SGD bond issuance. In Sep-17, CTRA issued S\$150m MTN with 4.85% coupon which matures in 2021. The MTN had an additional S\$50m facility.

With more high-rise projects, Makasar reclamation project, and softer payment terms in view of weak property demand, we believe the company will need more cash. Even with the additional \$\$50m facility from its recent MTN issuance, the company will need to increase land plot sales or inject more capital based on its maximum 30% gearing policy.

Outlook

Greater Surabaya contribution is overtaking Greater Jakarta

Over the past few years, Greater Surabaya's contribution to marketing sales is getting larger. In 2013, Greater Jakarta

contributed 35% of total marketing sales while Greater Surabaya contributed only 17%. Greater Surabaya's contribution has steadily risen to 37%, overtaking Greater Jakarta's 33% in FY16. In 9M17 Greater Surabaya's marketing sales stood at Rp1.8tr (35%), higher than Greater Jakarta's marketing sales of Rp1.4tr (26%).

Most of Greater Surabaya's marketing sales was booked in 3Q17, and dominated by Citraland Surabaya project. About half of 3Q17 marketing sales was attributable to Citraland Surabaya with the succesful launch of North West Hill cluster. We note that Citraland Surabaya had only contributed 9% to marketing sales in each of 1Q17 and 2Q17.

Sulawesi is getting traction

Pre-sales from CTRA's Sulawesi projects has doubled from less than 10% in 2013 to 19% in 9M17. Most of Sulawesi's pre-sales came from Makassar City from one of its biggest reclamation projects i.e. Citraland Losari. Since its inception in late 2015, the project has booked Rp1.85tr pre-sales. Its new project, Citraland Talassa City Makasar, as launched in 2Q17, and has booked Rp300bn pre-sales. This is a rather good showing for a new project. We believe Sulawesi will continue to contribute strongly in view of weak demand in Greater Jakarta area.

Marketing sales to reach Rp7.8tr

We expect the company to grow its FY17F marketing sales by 12% to Rp7.85tr from Rp7.19tr last year. We expect marketing sales from high rise and landed to reach Rp1.8tr and Rp6tr respectively in FY17F. The company guided Rp400bn and Rp300bn from its CWJ 2 and Citra Plaza Batam high rise developements in 4Q17.

FY17F/FY18F earnings revised by -26%/-25%

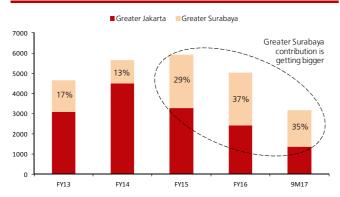

We revised down CTRA's earnings forecast by 26%/25% to account for lower gross margins from higher recognition of high rise residential units and interest expenses.

Valuation

We value the counter using RNAV and arrive at TP of Rp1,190 which is based on 29% (pegged to its 5-year average) discount to our base-case RNAV. Our RNAV of Rp1,675 is revised from Rp2,042 previously as we adjusted our take up rate and ASP growth assumptions. We maintain our HOLD call as CTRA is currently trading at 30% discount to our base-case RNAV.

CRITICAL DATA POINTS TO WATCH

Critical Factors

Marketing sales as share price proxy

Marketing sales will translate into revenue which in turn will determine profitability of property companies. Catching a glimpse of marketing sales movements can dictate share price direction.

CTRA is a well diversified property company. Although it has many projects across the country, historically, Greater Jakarta and Surabaya contribute half of its marketing sales. Therefore, any surprise in these two areas will have a great impact on CTRA's marketing sales achievement.

Property price growth will drive share price

We see high correlation between property price growth with CTRA's share price. Strong property price growth indicates high demand for property. Since end of 2013, property price growth has continued to decline, an indication that the property industry has been slowing down.

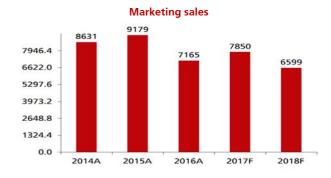

Property price is expected to be flat (<1% growth) in FY17. We see a bottom in property prices in 2017 before recovering going forward.

Keep an eye on mortgage rate

After a combination of property boom cycle, which caused property prices to soar, and several relaxations on LTV, mortgages have become more appealing to property buyers. Lower mortgage rate will boost demand for property. This will in turn provides a positive catalyst for CTRA's share price.

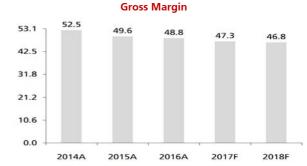

Affordability is key in property recovery

Property price growth has been decelerating since 2014, making properties more affordable. Subject to an improving economy, bottoming property prices will provide potential upside for marketing sales growth (thus share price).

Appendix 1: A look at Company's listed history – what drives its share price?

Marketing sales as critical factor to CTRA's share price

Source: Company, Bloomberg Finance L.P., DBSVI

CTRA's share price is driven by marketing sales

Strong marketing sales growth during 2009 – 2013 (63% CAGR) has been a strong catalyst for CTRA's share price. In mid 2013, despite its strong marketing sales achievement, CTRA's share price dropped significantly on the back of weaker than expected economic conditions.

In 2014, CTRA marketing sales growth was impeded. However the share price still rose on the back of positive sentiment from presidential election. The new president, Joko Widodo, has favoured construction programmes which also has a positive impact on properties-related industries. After the election euphoria, CTRA's share price corrected in mid-15, only to rise once again due to positive sentiment from Tax Amnesty program in mid-late 2016.

After the disappointment from the Tax Amnesty program, share price declined. We expect marketing sales to grow slightly to Rp7.85tr (vs management's guidance of Rp8.5tr). We believe low marketing sales growth will cap CTRA's share price at the current level.

Degree of property price growth determines share price rise

Source: Bloomberg Finance L.P., BI, DBSVI

When property price appreciates, so does CTRA's share price

We see property price growth as one of the drivers to CTRA's share price. During the property boom, property prices had appreciated significantly as demand was greater than supply. At the same time, CTRA share price had also significantly increased (63% CAGR during 2009 - 2013). CTRA's share price dropped

during property slowdown as property prices growth were declining.

We believe property prices will remain muted in the short term. This will in turn limit CTRA's share price growth. In our view, CTRA share price has limited downside risk as we believe property prices have bottomed.

Mortgage rate is inversely correlated with share price

Source: Bloomberg Finance L.P., BI, DBSVI

At the moment, mortgage rate and share prices are declining

Monitoring the mortgage rate is a good parameter to determine CTRA's share price movement. Historically, these are inversely correlated. It was only during early 2014 – mid 2015 that share price moved in the same direction. We believe share price appreciation was driven by positive sentiment from presidential elections as well as capital inflow.

There was a deviation during late 2016, where share price depreciated despite declining mortgage rate. We believe share price did not appreciate due to several factors such as 1) political and security issues which led to slow marketing sales, 2) uncertainties of several property regulations, and 3) oversupply in properties causing slower price growth, thus reducing investor appetite.

Ciputra Development

Balance Sheet:

Healthy balance sheet with reasonably low net gearing

CTRA was in net cash position from 2008 to 2013, as strong cash generation outpaced annual capex requirements. But, the accelerated progress of its superblock developments required more capex, and therefore, net gearing shot up to 27% as end of Sep-17. Combined with slowing demand and its policy of having net gearing at 30% maximum, we believe the company needs to raise funds to accomodate the superblock developments.

Share Price Drivers:

Marketing sales achieved and pipeline

Marketing sales are a good indicator for all Indonesia property developers (including CTRA), as it is a leading indicator of revenue generation for the next 2-3 years (depending on revenue recognition).

Key Risks:

Stricter regulations for high-rise developments. The plot ratio approval and balanced ratio rules, when strictly implemented, could potentially slow property demand. Liquidity tightening could dampen demand further.

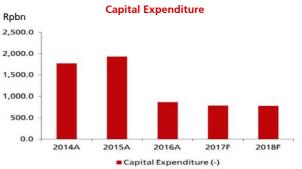

Potential interest rate hike. Property demand is sensitive to and is negatively correlated to interest-rate movements.

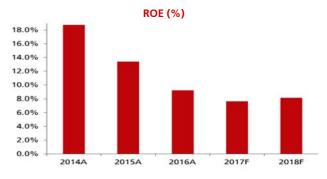

Strict implementation of potential revisions to housing development balance ratio (for low-end, mid-range and luxury houses). If such revisions are implemented strictly and retroactively, this could potentially mean additional costs for property developers and more complicated property development planning.

Company Background

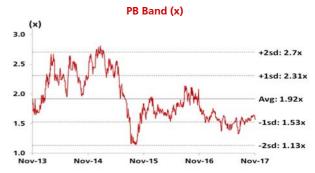

CTRA is a large scale residential and commercial developer, with a presence in 33 major cities throughout Indonesia, and has the most diversified product and customer range. The company was established in 1981 and has two listed subsidiaries – Ciputra Surya (CTRS) and Ciputra Property (CTRP). As of Dec-16, both subsidiaries were consolidated back to CTRA.

It comes with a rather steep price

Strong investment property growth

Despite a weak property market environment, Pakuwon Jati (PWON) is the only property developer whose share price performance has been positive since property boom. We believe PWON's share performance is supported by its ability to grow its investment property revenue by 21% CAGR since 2013. We expect PWON to book Rp2.4tr marketing sales this year, lower than management's guidance of Rp2.5tr.

Where we differ

We are approaching the stock with a more cautious stance as the stock is trading above its five years average, in our view. Since mid-2013 when the property sector hit its peak, PWON's share price is the only one that has appreciated 45% while the overall property sector lost 32% and JCI grew by only 16%.

Potential catalyst

Improvement in marketing sales achievement among property developers could change investor sentiment towards PWON. We believe PWON's share performance has been supported by favorable mix in its recurring and non-recurring portion which provide some buffer during weak demand environment.

Valuation

Our target price of Rp615 is pegged to a 16% discount to our base-case RNAV (based on its 5-year average). PWON is currently trading at a 10% discount to our RNAV estimate (+0.5SD from its 5-year average).

Key Risks to Our View

USD depreciation and higher interest rate

USD debt and construction costs (especially for the high rise projects) have left PWON exposed to foreign exchange risk. A higher interest rate environment might also translate into lower property demand.

Slower take-up at launches

Weaker property affordability, potential increase in interest rates and stricter implementation of requirements for high-rise developments could prompt delays in launching its project pipeline, resulting in lower-than-expected marketing sales.

WHAT'S NEW

Strong performance but valuations are lofty

Robust growth from top to bottom

Pakuwon booked Rp1.4tr revenue (+21% y-o-y, -8% q-o-q), with net profit coming in at Rp523bn (+26% y-o-y, -5% q-o-q). EBIT margin remained robust at 48.8% vs 48.6% in 2Q17 and 49.9% in 3Q16.

This brings 9M17 revenue and net profit to Rp4.4tr and Rp1.4tr respectively. PWON's 9M17 revenue is in line with our and consensus estimates. However, its 9M17 earnings trumped our previous forecast (meeting 85% of our FY17 forecast) due to lower operating, tax and interest expenses.

Stable recurring income growth

PWON booked Rp758bn recurring sales in 3Q17, a 16% increase over same period last year from its Pakuwon Mall II and III which were rolled out in February 2017. The newly opened Tunjungan Plaza Mall VI (Sep-2017) will be the new growth driver for PWON's recurring income next year.

Since 2013, PWON has been able to grow its recurring revenue at 21% CAGR. This growth has helped PWON to maintain its 50-50 portion of recurring and non-recurring sales.

PWON's recurring revenue (Rp bn)

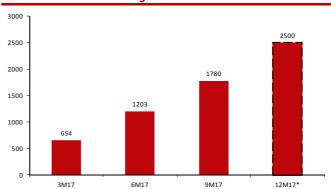

Source: Company, DBSVI

Marketing sales is largely in line

PWON achieved Rp577bn marketing sales in 3Q17. This brings 9M17 marketing sales to Rp1,780bn, or 71% of its FY17 marketing sales target of Rp2,500bn. Most of PWON's marketing sales came from its high-rise residential projects such as Kota Kasablanka, Tunjungan City, Pakuwon City, and Pakuwon Mall residential.

PWON's 2017 marketing sales

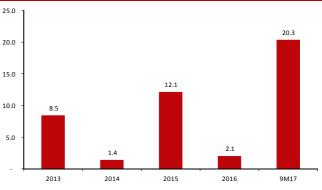

Source: Company, DBSVI *company target

Surge in mortgage provisions

We notice that this year PWON has a sizeable increase in its mortgage provisions. For 9M17, the company has booked Rp20bn provision for its mortgages, the highest since 2013.

PWON's mortgage provision (Rp bn)

Source: Company, DBSVI

FY17F/FY18F earnings revised by +10%/+2%

We revise up our FY17F/FY18F earnings forecast from Rp1.8tr/Rp2.1tr to Rp2.0tr/Rp2.1tr to account for lower operating, interest and tax expenses. We maintain our revenue forecast at for FY17F/FY18F at Rp5.5tr/Rp6.0tr and marketing sales projection at Rp2.4tr in FY17F.

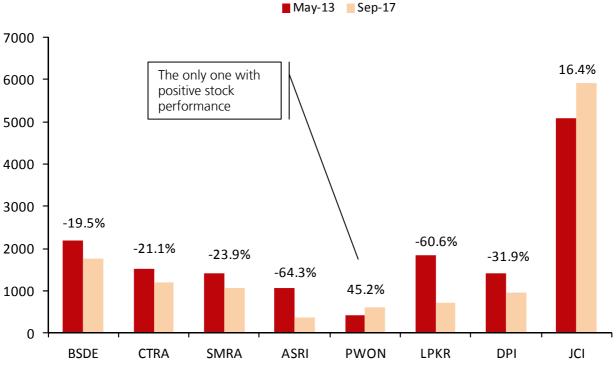

Valuation

We use discounted RNAV valuation to arrive at our TP of Rp615/share. Our TP is pegged to a 16% discount to RNAV (its 5-year average). PWON is currently trading at a 10% discount to RNAV, a premium over its 5-year average.

We believe the share price is at a fair level despite its strong performance and the preference for PWON among developers in Indonesia. From the peak of the property market in mid-2013, most developers have seen their share prices drop 32% drop on average. Only PWON's share price has surged 45%, compared to the JCI's gain of only 16%.

CRITICAL DATA POINTS TO WATCH

Critical Factors

Large portion of recurring revenue from investment properties

PWON generated 50% of its consolidated revenue from investment properties, mostly retail malls. We expect this proportion to be stable for the next few years as PWON has a balanced property portfolio. The large component of recurring revenue should provide PWON with a buffer against slower marketing sales in this challenging property market. This is in line with PWON's long-term target of 50-50 mix of recurring and non-recurring revenues.

Marketing sales achieved

Property developer recognises non-recurring revenue from marketing sales achieved in the prior 2-3 years. We expect revenue to grow moderately at 11% CAGR over 2015-18F given that marketing sales grew at 33% CAGR over 2011-15. We estimate marketing sales can still grow at a moderate CAGR of 10% over the next three years, supported by its existing residential townships and high-rise developments in Indonesia's two largest cities — Jakarta and Surabaya.

Product mix

About 65% of PWON's non-recurring revenue comes from highrise projects, and this segment has been generating stable gross profit margins (c.50%). Plus, given the large share of recurring revenue (50% of consolidated revenue) and stable sustainable margins, we expect overall gross profit margins to remain steady.

Good control of operating costs

PWON has been able to keep SG&A expenses (as a % of revenue) under control, despite the larger-than-average increase in two key items in SG&A expenses; "advertising, promotion, commission and events" for the purpose of attracting more demand for its developments during this challenging period and "salaries and allowances" given new substantial projects in its portfolios.

Strong bargaining power for retail mall operators

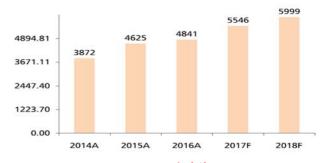

Given the limited supply of retail space supply in good areas, PWON (as one of the largest retail space owners and operators in Jakarta and Surabaya) should benefit from strong demand for retail space from both foreign and local brands.

Net Profit Trend (Rpbn)

Sales Trend (Rpbn)

Disc to RNAV trend

Source: Company, DBSVI

Appendix 1: A look at Company's listed history – what drives its share price?

Recurring income as critical factor to PWON's share price

Source: Company, Bloomberg Finance L.P, Company, DBSVI

Among companies in our coverage, Pakuwon Jati (PWON) has the largest composition of recurring income. About half of its revenue comes from investment properties and the other half from development properties (via marketing sales).

During property boom periods, PWON's share price had appreciated thanks to the growth of both marketing sales and recurring income. However, after a property market slowdown, marketing sales has less influence on PWON's share price. We believe this is due to its high recurring income proportion

among its peers, which will support its top-line in times of declining marketing sales.

With its strong base in Jakarta and Surabaya, the two largest cities in Indonesia, PWON has strong brand equity in the investment property business. We believe the ability to grow its investment properties further will act as a re-rating catalyst for its share price. This will hold true in a weak property market environment where investment properties will help support PWON's revenue growth.

During property sector slowdowns, PWON's share price has negative correlation with property price appreciation

Source: Bloomberg Finance L.P, BI, Company, DBSVI

In theory, property price appreciation should be a positive catalyst for property developers' share price re-rating. This holds true for most developers as well as PWON during property boom times.

However, the relationship has down a divergence for PWON's share price after the property market slowdown in late 2013. Since early 2014, the property market slowdown has resulted in lower property price appreciation but this had no impact on PWON's share price which kept trending up.

We believe this has to do with the market preference of favouring property developers with more stable earnings. PWON is one of the best candidates in this space due to the fact that half of its revenue comes from investment properties and it has been able to grow its recurring income during property market slowdowns. However, we think that property prices have already hit a bottom. The acceleration of property price gains might result in a change in the market's preference towards other property developers with more upside potential (mainly arising from their development property business).

Balance Sheet:

Net gearing level is reasonable

As a superblock developer, PWON's gearing has been higher than other developers. Net gearing has seen a trough and valley (but overall, it has improved significantly compared to 2008). And, with the current strong cash generation from asset monetisation, PWON's net gearing should stay at a reasonable level of c.40% in the next few years.

Secured alternative means to raise funds when required

On 27 Jun 2016, PWON has secured shareholders' approval for a 2-year option to execute a non-preemptive rights issue; maximum 4.8bn shares (equivalent to a 10% stake) at a minimum price of Rp514/sh – 25-day average closing price before the announcement on 19 May 2016.

Capex to normalise

We project capex to normalise going forward, after the spike in 2014 from major acquisitions (acquired a 67% stake in Pakuwon Permai project and 4.2ha landbank in T.B. Simatupang, South Jakarta).

Share Price Drivers:

Marketing sales achieved and project pipeline

Marketing sales achieved is a good indicator for all Indonesia property developers (including PWON) as it gives a leading indication of revenue generation for the next 2-3 years (depending on the revenue recognition).

Key Risks:

Potential interest rate hike

Property demand is sensitive to and is negatively correlated to interest rate movements.

Exposure to US\$, both in terms of financials (debt in balance sheet) and operations (i.e. higher material cost especially for high-rise projects with higher US\$-linked items), is a risk amid the weak IDR environment.

Strict implementation of potential revisions to housing development balance ratio (for low-end, mid-range and luxury houses). If such revisions are implemented strictly and retroactively, this could potentially mean additional costs for property developers and more complicated property development planning.

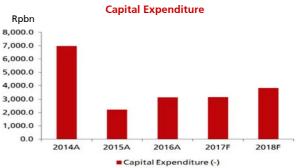

Capital-intensive projects require large funding.

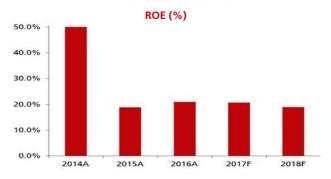

High-rise and retail mall developments require large upfront capital. Cost of external financing has to be kept in check.

Company Background

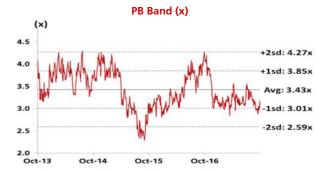

A mixed-use property and residential township developer with assets in Jakarta and Surabaya. PWON has a balanced portfolio with a large share of recurring revenues from retail malls.

A new symphony

Earnings recovered in 3Q17 but outlook remains subdue Summarecon Agung (SMRA) booked net profit of Rp70bn in 3Q17, doubling y-o-y and rebounding from Rp23bn loss in 2Q17. Overall margin trend remained in declining mode as SMRA's net profit margin has been below 10% since late 2015, much lower than the 2011-2014 average of 22%. The recent launch of a residential project in Serpong - Symphonia - is expected to boost marketing sales in 4Q17 but we see the implied land ASP coming in lower than the current land ASP in order to generate demand. Hence, margins are unlikely to return to historical levels anytime soon.

Where we differ: Maintain our HOLD call as we are less bullish on the near term outlook

Our view on the company is unchanged as we are less bullish on SMRA's near term outlook versus consensus. Some of SMRA competitors have the flexibility to sell land plots, which can support marketing sales and help to offset weak property demand. Furthermore, we believe SMRA's loyal customers are still sitting on the fence and waiting for prices of properties to re-emerge as attractive investment propositions.

Potential catalyst: Missing its marketing sales target. With three months left and relatively muted demand, we believe there is downside risk to SMRA's FY17 marketing sales target of Rp3.5tr from residential properties.

Valuation:

We revised our RNAV for SMRA down to Rp1,749 from Rp2,125 as we lowered our assumptions on take up rate and ASP growth. Hence, we lowered our TP to Rp1,050 (from Rp1,275 previously) based on 40% discount (pegged to its 5-year average) to our base-case RNAV. We maintain our HOLD call as SMRA is currently trading at a 41% discount to its RNAV.

Key Risks to Our View:

Better-than-expected recovery in property demand for SMRA's projects should lead to better revenue growth and upside to margins.

WHAT'S NEW

4Q17 marketing sales to be boosted by Symphonia launch

Back to profit but still lags behind schedule

SMRA booked net profit of Rp70bn in 3Q17, which doubled y-o-y and rebounded from Rp23bn loss in 2Q17. Revenue recognition from marketing sales of M-Town's high rise project has provide SMRA with a decent revenue stream, however at the expense of margins. SMRA has been recording net profit margin of below 10% since late 2015, much lower than 2011-2014 average of 22%.

SMRA's 9M17 earnings of Rp119bn represent only 27% and 36% of our and consensus FY17 estimates. We expect SMRA to stay profitable in 4Q17 with the absence of a surge in selling expenses, interest expenses, and one off tax expense that was recorded in 2Q17.

New project launched at lower ASP

Strong take up from its new project - Symphonia

Summarecon Serpong recently launched a new project in Serpong called Symphonia. The two clusters launched are Vivaldi and Verdi. Both recorded significant sales with about 230 and 130 units of houses sold for Verdi and Vivaldi respectively.

The Vivaldi cluster consists of two types of houses with 118m2 and 130m2 of space. The land area varies from 128m2 to 180m2 depending on house location. Accordingly, the prices also vary from Rp 2,123m to Rp 2,731m per unit Meanwhile, the Verdi cluster has smaller units of 66m2 and 78m2. Land area varies from 72m2 to 134m2, and house prices range from Rp 1,162m to Rp 1,652m per unit.

We believe the successful launch is attributeable to its lower unit prices compared to its older products. Based on our estimates, Vivaldi's land area was sold at Rp10m psm and Verdi was sold at Rp9m psm. Both are lower than exisiting projects which have been sold at Rp11m psm – Rp13m psm.

9M marketing sales achieved by area

Tupo	Size	Land Si	ze (sqm)	Price (R	p mn)
Туре	(sqm)	Min	Max	Min	Max
Vivaldi - Allegro	118	128	176	2,123	2,731
Vivaldi - Allegretto	130	144	144	2,399	2,442
Verdi - Cadence	66	72	130	1,163	1,440
Verdi - Chromatic	78	84	135	1,364	1,652

Source: DBSVI

Overall residential property demand is still slow

SMRA booked marketing sales of Rp147bn in September 2017 (-27% y-o-y, -52% m-o-m). Its 9M17 marketing sales came in at Rp2tr or flat compared to same period last year. This made up only 57% of its revised FY17 target of Rp3.5tr. Last year's achievement was 66% of FY16 marketing sales of Rp3tr.

With three months left and a weak market outlook, we expect the company to slightly miss its Rp3.5tr target by 5%. We expect the company to book Rp3.3tr marketing sales this year on the back of the Symphonia launch which could book sales of around Rp600bn this year. Landplot sales have exceeded its target while Kensington office is expected to meet its full-year target.

9M marketing sales achieved by product (Rp m)

Туре	Target	9M achievement	% achievement
Houses	1,350,000	745,448	55%
Shoplots	1,050,000	635,987	61%
Landplots	178,000	200,570	113%
Apartments	822,000	317,993	39%
Office Space	100,000	91,254	91%

Source: company, DBSVI

Serpong and Kelapa Gading performed well

Summarecon Serpong (SSP) and Summarecon Kelapa Gading (SKG) have performed well YTD with 74% and 71% achievement of their respective targets. SKG was supported by its Kensington office sales while Kensington residential was slightly behind target. SSP is still the main revenue engine for SMRA. It contributes Rp800bn or 73% of the group's FY17 target. Good sales rates were seen in its shophouse launches but condovillas came in below 50%. However, SSP continued to record decent marketing sales from inventory.

9M marketing sales achieved by product type (Rp bn)

	FY company					
Area	9M17	target	Achievement			
Kelapa Gading	212	300	71%			
Bekasi	345	700	49%			
Serpong	804	1,100	73%			
Bandung	423	1,000	42%			
Karawang	207	400	52%			
Total	1,991	3,500	57%			

Outlook

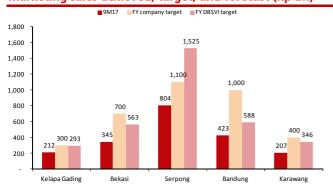

FY17F/FY18F earnings revised by -61%/-67%

We revised down SMRA's earnings forecast by -61%/-67% to account for lower gross margins from higher recognition of high rise residential units, and higher operating and interest expenses.

Marketing sales to reach Rp3.3tr

We expect SMRA to book Rp3.3tr in marketing sales for FY17, from Rp2tr in 9M17. Most of 4Q17's marketing sales will be contributed by its new Symphonia project that was recently launched, and shophouse launches in Serpong and Bandung. We believe Serpong will beat its FY17 target of RP1.1tr, Kelapa Gading will meet its target, while other areas would fall below their respective FY17 targets.

Marketing sales achieved, target, and forecast (Rp bn)

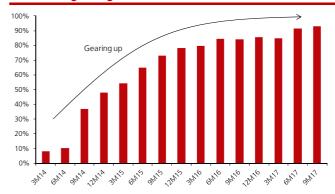

Source: company, DBSVI

Net gearing remains high at above 90% level

As of September 2017, SMRA net gearing stood at 93%, from 86% in December 2016. Slowing demand and high capex may place further burden on SMRA's balance sheet. We believe the company may need to raise funds to help its expansion going forward.

SMRA net gearing

Source: company, DBSVI

Valuation

We revised our RNAV for SMRA down to Rp1,749 from Rp2,125 as we lowered our assumptions on take up rate and ASP growth. Hence, we lowered our TP to Rp1,050 (from Rp1,275 previously) based on 40% discount (pegged to its 5-year average) to our base-case RNAV. We maintain our HOLD call as SMRA is currently trading at a 41% discount to its RNAV.

CRITICAL DATA POINTS TO WATCH

Critical Factors

Marketing sales as share price proxy

Marketing sales will translate into revenue which in turn will determine the profitability of property companies. Catching a glimpse of marketing sales movements can serve as a proxy of where the share price will head to.

SMRA still generates half of its marketing sales from the Serpong area. Its Kelapa Gading contribution is getting smaller due to limited developments and low affordability in the area. The developments of Bandung and Karawang which started in 2015 and 2016, respectively, has contributed c.30% to 9M17 marketing sales.

Property price growth equal to share price growth

We see high correlation between property share price growth with SMRA's share price. As one might expect, high property price growth indicates high demand for property. Since end-2013, property price growth has continued to decline, an indication that the property industry is in a downcycle.

Property prices projected to be stagnant (<1% growth) in FY17. However, we expect property prices to bottom in 2017 before heading on a recovery cycle going forward.

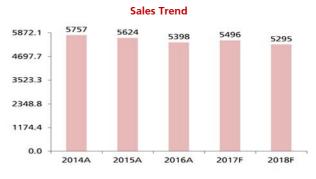

Keep an eye on mortgage rate

After a combination of the property boom cycle, which caused property prices to soar, and several relaxations on LTV, mortgage has become more appealing to property buyers. Lower mortgage rate will boost demand for property. This will in turn provide a positive catalyst for SMRA's share price.

Affordability is a key in property recovery

We see property price growth on a decelerating trend since 2014, thus making properties more affordable. Subject to economic growth rates, bottoming property prices will provide potential upside for marketing sales growth (thus share price) in the longer term.

Appendix 1: A look at Company's listed history – what drives its share price?

Marketing sales as key share price driver

Source: company, Bloomberg Finance L.P., DBSVI

Marketing sales is a good indicator of where the future revenue will be. Depending on the recognition, it would take 1-3 years to translate marketing sales into accounting revenue.

SMRA's marketing sales has been growing since 2009 until 2014 and share price has moved in tandem. Despite a property market slowdown since 2014, SMRA's marketing sales achieved during 2014-2015 has been strong compared to its industry due

to its high-rise project in Serpong CBD and the roll-out of its new Summarecon Bandung project.

SMRA's marketing sales have been moving downwards since mid-2015 until now, despite its new Summarecon Bandung and Summarecon Karawang projects. We believe SMRA's share price movement tracks its marketing sales achievement closely.

Price to income ratio: a good proxy to SMRA's share price

Source: numbeo, Bloomberg Finance L.P., DBSVI

Price to income ratio indicates how high housing property prices are compared to the income level. A higher ratio implies that properties are getting more expensive to buy.

We found this indicator an interesting proxy for SMRA's share price movement, as both seem to be moving in lockstep. During 2011–mid-2015, price to income ratio was getting higher due to significantly faster increase in property prices compared to the increase in income level. This provides an indication of the

attractiveness of SMRA's property products as alternative investments, in our view.

The price to income ratio has been on declining trend since mid-2015, as property price growth has trailed income level growth. We expect such a relationship to continue and potentially become a hurdle for SMRA's share price to head north.

Summarecon Agung

Balance Sheet:

Gearing up for more high-rise projects and potential acquisitions – the days of net cash position are gone for good. SMRA had been in net cash position from 2010 to 2013, as its strong cash generation outpaced annual capex requirements. However, more high-rise projects launched and land acquisitions have lifted gearing significantly. As of end-Sep 2017, net gearing reached 93%, a level not seen in the past decade. Given the slower net profit growth and cash flow generation, we expect net gearing to stay high.

Share Price Drivers:

Marketing sales achieved and pipeline. Marketing sales achieved is a good indicator for all Indonesia property developers (including SMRA), as it is a leading indicator for revenue generation over the next 2-3 years (depending on revenue recognition policy).

Policy loosening by government. The government's drive to lower funding cost (if successful) may provide some relief for developers with high gearing in the near to mid-term. Any loosening regulation regarding foreign ownership could also provide positive sentiments as a new potential market segment could be unlocked.

Key Risks:

Stricter regulations for high-rise developments. Plot ratio approvals and balanced ratio rules, when strictly implemented, could potentially slow property demand.

Liquidity tightening from banks could dampen property demand further.

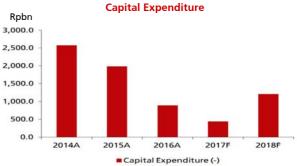

Potential interest rate hike. Property demand is sensitive to and is negatively correlated to interest rate movements.

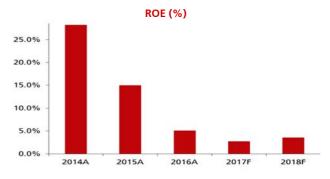

Strict implementation of potential revisions to housing development balance ratio for low-end, middle-range and luxury houses. If implemented strictly and retroactively, such revisions could translate into additional costs for property developers and more complicated property development planning.

Company Background

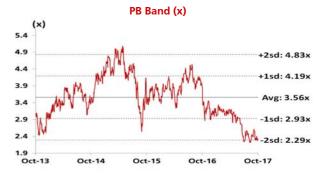

SMRA is one of Indonesia's most established property developers. It has three existing township developments and several investment properties in its portfolio which generate sizeable recurring income – forming c.30% of revenues.

- (b) there is any assurance that future results or events will be consistent with any such valuations, opinions, estimates, forecasts, ratings or risk assessments stated therein.

Please contact the primary analyst for valuation methodologies and assumptions associated with the covered companies or price targets. Any assumptions made in this report that refers to commodities, are for the purposes of making forecasts for the company (or companies) mentioned herein. They are not to be construed as recommendations to trade in the physical commodity or in the futures contract relating to the commodity referred to in this report.

DBSVUSA, a US-registered broker-dealer, does not have its own investment banking or research department, has not participated in any public offering of securities as a manager or co-manager or in any other investment banking transaction in the past twelve months and does not engage in market-making.

ANALYST CERTIFICATION

The research analyst(s) primarily responsible for the content of this research report, in part or in whole, certifies that the views about the companies and their securities expressed in this report accurately reflect his/her personal views. The analyst(s) also certifies that no part of his/her compensation was, is, or will be, directly or indirectly, related to specific recommendations or views expressed in the report. The research analyst (s) primarily responsible for the content of this research report, in part or in whole, certifies that he or his associate does not serve as an officer of the issuer or the new listing applicant (which includes in the case of a real estate investment trust, an officer of the management company of the real estate investment trust; and in the case of any other entity, an officer or its equivalent counterparty of the entity who is responsible for the management of the issuer or the new listing applicant) and the research analyst(s) primarily responsible for the content of this research report or his associate does not have financial interests in relation to an issuer or a new listing applicant that the analyst reviews. DBS Group has procedures in place to eliminate, avoid and manage any potential conflicts of interests that may arise in connection with the production of research reports. The research analyst(s) responsible for this report operates as part of a separate and independent team to the investment banking function of the DBS Group and procedures are in place to ensure that confidential information held by either the research or investment banking function is handled appropriately. There is no direct link of DBS Group's compensation to any specific investment banking function of the DBS Group.
